## NEWS IN BRIEF

## Honeywell boosts Level 6

BOOSTING the top end of its Level 6 minicomputer family, Honeywell has introduced the Model 57 which is software compatible with existing Level 6 minis. At the same time the smallest Level 6 machine, the Model 36, has been replaced by the Model 33. Prices for Model 33 and Model 57 start £4,000 and £31,000 respectively.

## UK subsidiary

THE US company that manufactures the Basic/Four multi-terminal commercial system, Management Assistance Inc. of California, has established a wholly owned UK subsidiary by purchasing the firm that has been distributing its systems here since early last year, Basic/Four (UK) Ltd.

## Wanted: Immos

GREATER Manchester has joined the growing list of regional authorities seeking a claim for Immos, the NEB's fledgling semiconductor company. Voiced by the North West Industrial Development Association, the claim is based on the region's existing experience in the field, with companies like ICL, IBM, NCR, Honeywell and Ferranti already established in the area.

## Gray power in UK

ONLINE access to a Cray-1 vector processor is now available in the UK via the LUCS bureau's parent company, United Computing Systems Inc. of Kansas City. Meanwhile Cray Research has received an order for an \$8.8 million Cray-1 from AT&T subsidiary Bell Labs for installation at its Murray Hill, New Jersey plant in 12 months' time.

# 'UK first choice for new investment'—NCR boss

From Keith Jonass in Dayton, Ohio

DESPITE the cutbacks in its workforce being made by NCR at its Dundee factory due to changes in technology the company's president, Charles Exley, favours Dundee as the location for any new European manufacturing facilities that may be required by NCR in the future.

Exley told Computer Weekly: "If we needed to expand our manufacturing capability in Europe we would invest in the UK. One reason is that we consider labour relations to be good in the East of Scotland."

Exley pointed out that the Dundee plant is now manufacturing NCR machines ranging in size from the £200 series of interactive multi-terminal business systems up to the £800 series of medium scale mainframes. But he confirmed that Dundee will not build the £800 series of large scale mainframes which will soon be competing with systems as powerful as the IBM 3033.

The £800 is expected to be announced before the end of this year and Exley freely admitted that NCR had lost some big customers in the past through not being able to offer them the capability to upgrade to a large scale mainframe.

Looking at word processing, a growing market not yet exploited by NCR, Exley said that his company had no plans yet to move into the word processing business, and stated frankly: "We do not understand the requirements of the market and in any case we are too busy with other things at the moment. But word processing undoubtedly has great potential."

The majority of NCR's business comes from customers in retailing and banking, many of whom could be intimately involved with Electronics Funds Transfer Systems when and if they are implemented on a significant scale. But Exley is rather sceptical about the pros-

pects of one aspect of EFTS, automatic debiting, catching on in a big way.

"I cannot see automatic debiting appealing greatly to the consumer because his bank account would be debited directly and immediately from the terminal in the shop so he would lose the advantage of float."

"In addition, the cheques that consumers use for payment at the moment cost them nothing so why should they bother with automatic debiting?"

## Qume launches double density diskette drive

From Louise Kayhoe in California

SHORTLY after news that it is likely to be taken over by ITT (CW, September 28) Qume has entered the disc drive market with a dual sided double density diskette which is to be manufactured under licence from YE Data of Japan.

Qume claims to have overcome the media wear problem which have dogged dual sided disc technology, and expects to have its Data Trak 8, eight inch drive in volume production early next year. The company will follow up with a 5¼ inch drive in the second quarter of 1979. Qume is already sampling the Data Trak 8 to unnamed OEM customers.

Data Trak 8 stores 1.8 Mbytes of unformatted data and 1.2 Mbytes in IBM format and is compatible with existing drives. Facit, which markets Qume printers, it to discuss European marketing of the drive next week.

Elliot Wasserman, Qume vice president of marketing, said that he expects Data Trak 8 to be used in a wide variety of systems. He suggested that they would be incorporated in word processors, text equipment, medical systems, and home computers as well as general data processing systems.

"The Data Trak 8 introduction will mark the long awaited shift by word processor and small business system makers to the higher capacity drives", he noted.

According to Qume, the Data

Looking suitably thrilled by the presence of HRH Prince Charles are these ladies being safely held in check by the fence around one of the Royal Electronics factories at Harlow, Essex. The four ladies are (from left) Dot Natt, "Flo" Dimaline, Mary Reed and Shashi Kumra.

Prince Charles visited Coeser last Thursday in order to pick up the information on the electronics industry in readiness for a meeting he attended the following day of the Radio, Radar and Electronic Capital Goods Industrial Strategy Sector Working Party at the National Economic Development Office.

Low media wear was achieved by electronically and mechanically controlling the head landing and take-off dynamics until the needed combination was attained — a fast approach and slow soft landing followed by a slow take-off with rapid acceleration.

## Details of first System X sites

THE first two System X exchanges to be ordered by the Post Office will be for Woodbridge in Suffolk and Baynards House in the City of London. The orders will be placed with one of the System X contractors early next year and have already been approved by Post Office senior management.

Woodbridge will have a small 930 line exchange and Baynards House a junction tandem exchange to handle traffic between local exchanges.

Since mounting a display at Communications 78 in April the Post Office has let out very little information on System X, other than a rough schedule for its phased introduction between 1981 and 2010.

Plessey, GEC and STC are the Post Office's major telecom-

## A double touch of luck

THERE'S more than a touch of luck about the names X-Data and Computercall, the peripherals wholesaler and service call logging and supply companies set up by Henry Lewis. The names are also carried by two motorhomes owned by Henry's brother GRIFF, a fellow director in the companies. Last week X-Data romped

hams at Haydock Park at 33/1 to score her first win and on Tuesday, Computercall continued the success story with a 10/1 victory at Edinburgh. Commenting on the wins Henry Lewis said, "Value for money is nothing new for X-Data, we lead the field in pricing. And Computercall was just living up to its name."

## US court throws out appeals by Milgo

THE US Supreme Court in Washington has refused to hear appeals by Racial-Milgo on any of its antitrust claims against Western Electric regarding its connection of modern AT&T's telephone network.

The district court, in rejecting the claims, held that Western Electric was immune to antitrust laws because the FCC's exclusive jurisdiction over its activities.

The legal battle started in 1974 when Western Electric and Milgo, claiming violation of patents on several models Milgo countersued in April 1974 asking \$4 million from Western Electric as damages for breach of antitrust laws by combining with AT&T and Bell company to buy Western Electric modems exclusively impose discriminatory tariffs on non-Bell modems.

Non-Bell modems are connected to the telephone work, according to Milgo, "expensive and unreliable" DAA data access devices for which the tariff is allegedly without FCC approval.

Western Electric also opposed the appeal because it wants a once-for-all decision on the antitrust aspects of the claims which relate to more than 20 suits now in process.

The Supreme Court said the rejected claims could only be reviewed until the rest of Milgo's claims against Western Electric had been heard.

## Thomson order

TO enhance its reservations and administration system, Thomson Holidays has ordered a Junquard word processing system from Hallmark Computers of Chiswick, London.

## Savings bank challenge

A HOLO move by ICL to dislodge Philips, Datacube, NCR and Olivetti in the savings bank counter terminals market has won the company an order for some 200 terminals from the Building Society.

ICL's device is based on the 7800 cluster terminal system with a specially designed 480 character CRT terminal with card reader and printer/tally roll printer from Okidata.

## Telefile new chief

FOLLOWING a "greater deficit than expected" in the last financial year, Telefile has made Hal Edson, previously vice-president of technology, the new chief executive of the company.

Telefile's first UK plug-compatible customer — Back page.

## System 38 price

A LARGE configuration of IBM's new System 38 business computer is rather cheaper than the company first indicated. Having redone its sums, IBM now says that a System 38 with 30 displays, 10 printers, 1.5 Megabytes of main memory, 390 Megabytes on disc and two 6503 pin printers would cost £288,000, and not the £330,000 stated last week (CW, October 26). The rebate would be £7,200 a month on a three-year lease.

## Medical fears

IN TRYING to calm medical fears about those of computers for a national child health care system, Social Services Secretary David Ennals has told the British Medical Association that his department was willing to consider modifications required by doctors and confirmed that access to personal medical records could be restricted to approved research, under the control of a doctor.

## Briefing

### Software not excluded

COMPUTER software is not excluded from the Queen's Award to Industry after all, according to the office which administers the scheme. It admits, though, that confusion may have arisen in the past from replies given to intending or unsuccessful applicants.

The Computing Services Association, which wrote to the Queen's Award Office to query the policy (CW, September 28), has been told that there is no question of software being ineligible for the award.

## Off to Greece

A THREE-MAN delegation from the UK, headed by director-general of the Computing Services Association Alan Benjamin, is visiting Greece this week at the invitation of the Greek government to discuss the contribution the UK could make to the development of the Greek computing activities.

## Savings bank challenge

A HOLO move by ICL to dislodge Philips, Datacube, NCR and Olivetti in the savings bank counter terminals market has won the company an order for some 200 terminals from the Building Society.

## Telefile new chief

FOLLOWING a "greater deficit than expected" in the last financial year, Telefile has made Hal Edson, previously vice-president of technology, the new chief executive of the company.

Telefile's first UK plug-compatible customer — Back page.

# 'Cross should have left earlier'—ICL chairman

Slowing out the candles at ICL's tenth birthday Press "party" last week is Computer Weekly editor Malcolm Poltu, watched by ICL chairman Tom Hudson (left) and the head of ICL's public relations, Donald Cook (background). It took but one breath to douse the flames.

THE man who appointed Geoff Cross to head ICL, the company's chairman Tom Hudson, has said that he wished Cross had left the company a year before he did, last year.

Speaking last week at a Press briefing to celebrate ICL's tenth anniversary, Hudson also re-opened a sore that has festered within ICL ever since its inception when he declared that if he had been chairman in 1968 he would have killed the English Electric System 4 line, because of the failure of "organisational backing" for System 4. English Electric merged with ICT to form ICL.

The merger, he said, had cost ICL about £80 million in trying to create a unified organisational structure and product line.

In a pointed reference to recent criticisms from the Public Accounts Committee (CW, October 12) about ICL's slowness in repaying the £40 million loan which Hudson said had been "extracted" from the government to help develop the 2800 series, Hudson wryly commented that the £40 million could be viewed as "a 50% instalment" by the government to cover the costs it had bequeathed to ICL by what he obviously saw as a forced merger.

On Geoffrey Cross, whom Hudson had recommended as managing director in 1972, shortly after he himself had become chairman, Hudson said that for four years Cross had fulfilled the corporate need at that time and that his contribution to the company had been "essential, desirable and invaluable".

But from 1976 the men suited to lead ICL into the next decade, he said, was someone with a wider understanding of the computer industry and of marketing, such as the new managing director, Dr Chris Wilson.

Full report on Hudson and Dr Wilson speeches, page 12.

# Xerox to drop UK project

By Cameron Davis in Washington, and Rory Johnston in London

CONTINUING its growth in the automated office and communications market, Xerox is likely to establish a new packet-switching network in the US — but it has decided to abandon plans for establishing a large European research centre in Milton Keynes to study the development of advanced copiers and other projects related to office automation.

The official reason given for the closure of the Milton Keynes site is that the number of staff employed is lower than originally planned. But it is known that there has been considerable rivalry between the various research laboratories in the Xerox organisation on both sides of the Atlantic and it appears that the centres in Palo Alto and Los Angeles have won out in the struggle for some of the work Milton Keynes was doing. The 450 staff who are already in temporary accommodation in Milton Keynes are to be moved over the next year back to Welwyn Garden City, the town they were moved from in 1975.

In the US the packet-switched network would represent a significant further step for Xerox in its moves to gain a large share of the burgeoning electronic office and information systems market.

To sharpen its focus on these markets, the company recently established a new organisation, Xerox Business Systems, to deal with all products that are not copier/duplicators — namely, word processors, facsimile and non-input printers, such as the 9700 fast laser printer for com-

puter users. The world processor that even attempt can use.

## VSPC users angry with IBM

USERS of IBM's VSPC are angry that the company will not make available to them an end-user system that it offers both on the Call service and the newly announced European VSPC service, EPSC (Computer Weekly, October 12).

The software in question is Applications System (AS), a series of integrated packages for direct use by managers. Some IBM customers have made substantial use of AS under Call, and are annoyed that this work cannot be brought in-house along with other Call applications.

IBM's refusal to sell the software for use on customer machines is thought to be designed to protect its own bureau services. Were independent bureaux to install the package, they would compete directly with Call and EPSC.

However, IBM has told one user that AS is not immediately accessible to the rest of the company, being owned by its company developer, the Remote Computing Services Division in the UK.

The chairman of the European

## Marriage à la modem?

GET ready for my weekly aaaaarrrggghh! (They seem to be coming even more frequently than that nowadays.) Two sociology lecturers at the University of Utah have developed a marriage simulation system to enable people to choose a partner "rationally and logically."

They call it Malesin, and if this conjures up images of simulated rolling pins and simulated mothers-in-law, I gather the system asks you questions about your "marital values and expectations, your general value system and prospective partner's values." It matches your answers with those of prospective partners, and tells you whether the marriage would be successful or not.

It even composes your answers with "a set of idealised values that marriage counsellors have determined lead to a successful marriage."

The questions you are asked about yourself and your ideal partner concern physical habits, characteristics, personal habits, economic orientations, sexuality, personality characteristics, television viewing habits, job mobility, child discipline, "attitude toward life," and so on.

Reading about things like this is always very depressing.

## Pre-paid publicity

I'M SURE you will agree that the foundation of Britain's pre-eminent position in the advanced technology race is our aggressive, imaginative, no-expense-spared marketing. Take, for example, an advertisement placed by Digico in the Financial Times. The firm offers to send you a FREE reprint of a computer magazine's appraisal of their sward-winning minicomputer, so long as you send them a stamped addressed envelope. Perish the thought that they should spend 7p on a prospective customer!

Don't think

## LEASED LINES

What with the excitement of setting up the new offices in St. James's and buying a 3 megabyte 370/158 from an Italian bank, J.R. has gone power crazed. Now he wants to set up a computer dial-up service so that we can have instant access to clients' needs and exchanges. I suggested a blackboard and chalk and a kind of hot look over his lap and to that of a religious zealot. I suppose we shall do it soon and will tell you all know.

M.R.D. bought and sold some Model 5 IBM tape drives last Thursday and this is developing into a good line for us.

370/148s are a very good buy at the moment and we can offer a selection for you. The base price is 60% of IBM's new price. This means we can lease a 1 megabyte 148 to you for the astonishingly low price of £7,999 per month over four years. You can buy, lease or take a conditional sale - with or without Government capital allowances. So, if you can't wait for the new "E" series, give us a ring.

J.R. has some 3420 Model 8 tape drives and 3330 disk drives for sale. M.R.D. wants to buy 3360 disk drives. Me? Well I just want to tell you 370/158 to pay the rent.

Will write again next month.

M.P.H.

## THE IMPACT OF THE MICRO

The public debate about the impact of information technology has generated much hot air and many alarming warnings about the likelihood of the micro leading to massive unemployment, or has fed glowing hopes that it will be the dawn of an entrepreneurial Industrial Renaissance.

When the debate moves from theory to reality, it is clear that the trade union movement is going to play a major part in shaping Britain's response.

One of the most active trade unionists in this

sphere has been Ian Benson (right) national officer for Tass, the white collar section of the Amalgamated Union of Engineering Workers. Benson is a member of the Neddly computer sector working party, and proposed a motion at the Labour Party conference last month proposing more effective government planning to cope with the introduction of new technologies. In this interview with Computer Weekly editor Malcolm Peltu, Benson discusses significant points.

## Key roles for training and public ownership

THE most significant result of the current flurry of activity relating to "the impact of the micro" is likely to be a major restructuring of some of Britain's educational and training institutions - and the bringing of more information technology industries under public ownership.

That is the view of AUEW/Tass national organiser Ian Benson, who has been prominent in much of the "micro revolution" activity. While few who have examined the problem will question the need for new initiatives in training and education, the nationalisation of information technology is a proposal which will face stiff opposition.

Benson acknowledges this in his references to the Labour government, which he hopes to see re-elected, despite some

something positive to ensure that there is a co-ordinated strategy linked to industrial requirements so that there is no long term shortfall of staff with the technical skills that will be needed," he said.

One of the most urgent actions needed, he believes, is the establishment of some new central body with power to allocate resources to education and training where needed.

If the Labour government remains in power for another year or so, Benson believes there will be some major changes in the nature of the institutions responsible for education and training. Under the Tories, however, he believes the changes will happen at a slower pace.

Political points such as these are seldom far from Benson's view, because he sees politics as being intimately bound with the

micro industry, and the non-appearance of a national newspaper.

"The connecting thread is, of course, the technology. But Benson also sees an important link between the technological debate and the central argument on the wider political scene - the question of state intervention in industrial policy."

This, he said, goes beyond just the issue of the ownership of the means of technological production and into the question of how wealth generated by new techniques can be distributed to meet the needs of a society where some traditional beliefs and concepts of employment opportunities will be challenged.

"We have suffered from a hegemony of rule by economic pundits who have believed in the formula that technical change equaled increased production which would mean increased demand," he said.

But the potential that the micro, computers and automation give to increase manufacturing productivity with significantly fewer people could "change the focus of economic activity" so that "employment was no longer necessarily seen as a good in itself."

He went on: "I believe that it is important to have public ownership of technology-based industry and for the state to channel resources to wealth-producing areas fuelled by the technology."

"The state can then distribute the wealth to nourish the human factor, through education and the social services. After all, one of the main elements of wealth creation comes from the collec-

pare people for a future in which there will be less work is likely to create job insecurity."

Like many capitalists of whom he is so critical and also the former Tass member, Employment Minister Albert Booth, Benson would lay more stress on wealth creation rather than dreaming of all-year-round Christmas.

"In the future there will be an increasing proportion of the population, including a growing number of retired people, who will not be involved in productive employment. If we are to avoid a total breakdown in living standards we must find ways of growing the economy."

The unions, however, are often criticised for being a hindrance to finding ways of improving the efficiency of British industry and there are many examples, such as in Fleet Street, where union resistance has slowed down or halted the introduction of new technology.

Benson replies to this criticism by suggesting that it is better to draw an overall conclusion because the reaction of the workforce to the introduction of technology "depends a lot of particular circumstances."

In other areas, such as computer aided design, computers can enhance a job and he believes agreements on the introduction of new technology will be reached, with an increasing emphasis on "quality of life" rewards, such as lower working hours and retraining, rather than purely financial ones. He believes that people will be looking more for "career security" than just job security and that a life-long national

**Legislation to ensure that the workforce is consulted before new technology is implemented would not be of much practical benefit, according to Ian Benson. Employment minister Albert Booth said he was in favour of such legislation (CW, October 12) but Benson said that such a requirement was best enforced by collective action and should not be left to the law.**

tive intelligence of the workforce. It therefore makes both economic and social sense to raise the level of education, not only in schools but through an increase in life-long education.

"There must be an enormous transfer of wealth, co-ordinated by the state, into accelerating the development of human resources through the education and training system."

He does not, however, agree with fellow trade unionists, such as the ASTMS general secretary Clive Jenkins, who say that information technology should be seen as an opportunity for moving towards a "laissez-faire society" where it will be expected that most people will be employed to do "work."

"It is all very well having an image of a kind of Southern Californian Utopia but the proponents of that goal seem to have only a vague idea of how we will get there."

"People do not want to be educated to sit on their backsides, and to start trying to pre-

## Users hit out on all sides in BCS three-year survey

By Malcolm Peltu

SUCCESSFUL use of computers in the future will depend on improvements by manufacturers and users in the stability of systems, better implementation of standards and improved training to increase the quantity and quality of computing professionals.

That is the main conclusion of a survey of users conducted over the past three years by the BCS, involving the views of the 27 organisations representing a wide spectrum of users.

As reported (CW, April 6) the resultant report criticises the user-manufacturer interface as well as indulging in an all-round flagellation of all sides of the computing world.

To an outsider, the report reads like an indictment of all things relating to computing development and does not speak well of the attempts of the BCS itself over the last 21 years to improve the professional image of computing people.

But to anyone in the computing world it contains little that is new, although it provides a service by cataloguing some of the classic computing horrors and recommending some positive actions, even though it is difficult to see why these calls for action should succeed when similar ones in the past have failed.

For example, on standards it makes the familiar call for intensified activity by international standards bodies, with increased user participation and more vigorous government procurement action in insisting on standards.

Yet it suggests that all existing groups trying to

achieve a unified user voice, such as the National Computing Centre and user groups, have proved to be inadequate.

As Donald Moore, of management consultants Peat, Marwick and Mitchell, who chaired the committee which undertook the study, says in his foreword, "The action that is recommended in the report covers a very wide field. To be effective it will need the encouragement of governments and some altruism on the part of the computer manufacturers and professionals who occupy established positions."

The following is a summary of some of the report's conclusions:

- Cost and performance: Most of the points raised by users relate to specific difficulties which they have experienced with past and current products of the computer hardware, software and service industries, and which they would like to be remedied in future. While market forces can resolve many of the problems, it was felt that there are some product areas where it would be valuable if a mechanism could be established to examine, with users' help, what further action might be taken to ensure that their reasonable aspirations are not frustrated by monopoly, or by market dominance.

- Users' need: There is a general sense of exasperation among users over the mystique surrounding computing equipment and practices.

- Hardware unable to operate in an ordinary office environment, software imposing arbitrary limitations and heavy operating overheads, and program packages which perform less than users require, are examples of numerous ways in which users

believe that suppliers are failing to respond adequately and sensitively to their needs.

Users are weary of phreptic innovation, and all the expensive and disruptive changes it has involved for them. Although they do not ask for development to cease, they do ask for action that will establish a period of stability which will be characterised by longer economic lives for their systems, and by an evolutionary continuity in design which will protect their investments.

A closely related requirement is for fewer standards, but more standardisation. This will give users a wider freedom of choice, and avoid their being locked-in to the suppliers of their installed systems.

Users are also looking for some action to relax the restrictive and unfavourable terms of contract imposed on them by suppliers.

- Systems performance: Too many users have been disappointed and dissatisfied by the performance of their computer

systems. A significant improvement might be made by taking action to ensure that, in future, users participate fully in drawing up system definitions which will specify in detail precisely what requirements are to be met, and thus determine the work of the system designers and programmers.

Participation will not be possible for all users, especially the smaller ones, and some others will not wish to take part: it would, therefore, be valuable for professional bodies, such as the BCS, to consider how best to bridge the communications gap between lay customers, the appropriate specialists and the suppliers and to make these views known.

- Micro and microcomputers: Users are concerned that the introduction of even smaller and cheaper mini- and microcomputers will spread the direct use of free-standing and desk computers to a great many first-time users who have had little training and no experience in system design, programming or

## Voice of management

REPRESENTATION for the voice of user managers and action to ensure that there is some recognised way of making computing professionals accountable for the systems they implement, were two key issues raised by the BCS user survey.

In many areas, such as dealing with government bodies on standardisation, manufacturers on contracts and, increasingly, with unions, general management are said to feel at a disadvantage as existing bodies do not represent the view of management. The report calls for an organisation to be set up to express the collective management view "forcefully, cogently and objectively."

The report also concludes that the "total dependence of many large organisations on their computer systems" raises urgent questions relating to the approval and security of the system and of the accountability of those involved in developing it. It calls for an initiative by interested bodies to determine what action is needed to protect the interests of users and society at large.

The result could be widespread inefficiency, errors and duplication of work already done.

- Specialist staff: Users express considerable disenchantment with many of the computer specialists they employ, and consider it necessary to increase both the quantity and quality of the systems analysts, programmers and, to a lesser extent, the operators.

The quantity could be increased by taking action to improve the pay and working conditions and career prospects of in-house specialist staff; enlarge training facilities; improve productivity; persuade other staff managers and non-computer specialists to train and

transfer into computing, for a period.

The quality could be improved by taking action to: increase the relevance and applicability of computer education and training to users' actual requirements; discourage job-hopping by requiring applicants to provide evidence of having worked on projects to their completion; encourage the acquisition of qualifications (MBCS, for example) by persuading employers to recognise these as necessary conditions for recruitment and promotion into the more specialist posts.

\*User Requirements in Data Processing will be published by the BCS on November 29. £15 for non-members of the BCS, £10 for members.

## 'Computers are used to silence creativity of people on shop floor'

FAR from saving us back-breaking work, computers will have the same destructive effect on creative intellectual work as machines had on skilled manual work in the first Industrial Revolution. This is the view of Mike Cooley, shop and a director of the Centre for Alternative Industrial and Technological Systems (CW, February 23).

Cooley, a mechanical engineer who is also past president of AUEW (Tass), was speaking on "Computers: An Aldor or an impediment to 'Creativity'?" in the BCS lecture series, Computers and Society.

In addition to decrying the destruction of creativity, Cooley put forward the view that "computers are the Trojan Horse by which Taylorism is going to be introduced into intellectual work." By Taylorism he means "Scientific Management," whose inventor, Frederick Taylor (d. 1915), theorised that each worker should be told exactly what to do, and that the manager should be the one to make being disastrous to the overall scheme.

As an example of this, Cooley described computerised design systems in which humans are forced to keep pace with the rate at which the machine processes data. This way, Cooley said, the human's creativity is eroded and he is "reduced to head-scratching status."

"We are being conditioned to accept a role subordinate to the machine," he said, "and we are being conditioned to accept a role subordinate to the machine."

Cooley quoted an American management scientist talking about ways in which human behaviour in production systems can be controlled, placing human material on the same footing as physical raw materials. "There are many disadvantages in the use of human operating units," this scientist said, "and any system using them must incorporate appropriate safeguards."

Cooley expressed horror at this notion that human beings exist for the benefit of the machine - rather, he said, the machine should be designed for the benefit of the people. It is the computer that is becoming the centre of design activity, rather than the draughtsman, as in former times.

He described how the work of a draughtsman, skilled and creative, in transforming a mechanical designer's idea into the exact form of parts, was being taken over largely by mechanical draughting aids. He claimed that even architects are being "de-skilled" by the use of graphical computer systems.

"Computers are being used to silence the common sense and creativity of people on the shop floor," Cooley asserted.

He also claimed that over the centuries science and technology have acquired "built-in" values, such as "drive, energy and efficiency; and have been like a straitjacket, forcing more and more people into the field, to bring in so-called 'famine values' such as 'substitutability', 'flexibility', 'adaptability' and 'creativity'."

# GILB'S MYTHODOLOGY

Let's take automation one step further

I STILL see it in books and articles: "Of course, well-written and detailed operator instructions must be produced as part of the documentation package."

This is a traditional hangover from the days when computer hardware was expensive compared with today, and the rate of processing work was slower.

My belief and practice is that all operator instructions can and should be integrated into the program. The system itself should be capable of giving all necessary operator instructions in the appropriate situation.

It should also be programmed to undertake a maximum of the checks and analysis which the operator is asked to do today. It should also double check that the operator has actually correctly carried out any actions the machine has requested.

To illustrate how far I would and do go, I'll mention the system where after the database backup tape is produced, the system requests that the file protection ring is removed.

The tape is remounted at machine request and the machine attempts to write on it. If it succeeds, then we know the operator has not removed the ring. Better to learn that now than in a recovery situation.

My operator procedures might well function within the framework of some operating system, but they are somewhat independent.

They are portable with my system, even when the operating system rug is pulled from under our feet. The controls are far deeper than the surface checks most operating systems perform, and the rejection of file mountings and program executions are more absolute and cannot easily be overridden by operators who are convinced they have the right file on anyway.

Frankly, any system which is designed to rely on a human operator or a generalised operating system is suicidal.

The principle of putting all operator instructions into the program extends to microcomputers. Given reasonable secondary memory such as floppy discs and the fact that most microcomputers become totally inactive if people don't know what to do, or have done it incorrectly, the case for building in all manner of help and instruction into the micro-computer is great.

It is only slowed down by our laziness in actually designing and writing the programs, which should not really cost that much more than equally good written documentation and which could replace it.

In more advanced self-adapting systems, the use of the "?" should be logged in order to find system trouble spots. In some systems the user supervisors should be able to insert appropriate instructions on as needed basis.

Let us push the concept of automation one step further.

## Puzzler

THIS week's puzzle is submitted by Gilbert Watts, of Sale, Cheshire. He writes: A famous combinatorial problem is the possible number of derangements of n objects, a derangement being a permutation where no object occupies its original place, eg in how many ways can a postman put n letters through n boxes wrongly? The solution depends on a recurrence equation, and for n = 4 the number of derangements D = 9, and for n = 5 then D = 44.

The five directors of Alphabeta Systems went one better than this. After a celebration dinner in honour of a successful year, each man not only brought away the wrong hat and coat for himself, but also the wrong hat and coat for his wife. Moreover, the said pairs of hats and coats came from different couples.

The problem is, how many different ways is this double derangement possible within five people? See page 53 for solution.

# THE INTELLIGENT SUPPLY SOLUTION

The full range of Tally printers; Visual display terminals by Hazeltine; Data recording products by 3M... Everything ready for fast delivery, often from stock, at truly competitive prices.

They're all good reasons why Mancos is your intelligent supply solution.

Contact us soon.

## PROGRAMMER NOTES

This week's Programmer Notes was discovered, like the Dead Sea Scrolls, by an intrepid explorer rummaging through some dusty areas (or what we in the business call a heap of psper in the bottom drawer). The author of this piece was identified on the dusty scrolls as having been in our possession, but would like to hear from anyone who can throw a light on its origins, indeed, significance.

# The Gospel according to the Project Manager

IN the beginning the Project Manager created the Programming Staff. The Programming Staff was without form and structure. And the Project Manager said: "Let there be Organisation." And there was Organisation. And the Project Manager saw that Organisation was good: and the Project Manager separated the workers from the supervisors, and he called the supervisors "Management" and he called the workers "Exempt".

And the Chief Programmer sent his Analysts in the Users and said: "Let Specifications be written." And there were meetings, and lunches, and telephone calls. And the Specifications were written. And there was a Payday and the Happy Hour, one month.

AND the Project Manager said: "Let there be a mission in the midst of the Organisation and let it separate the workers, one from another. And the Project Manager created the mission and he called it "The System". And the Project Manager separated those who were to benefit from The System from those who were to build it. And he called the former "Users" and he called the latter "Programmers".

AND the Project Manager said: "Let all the Programmers be gathered together into one place and let a Chief Programmer be brought up to lead them. And it was so. And the Project Manager saw that he was competent.

AND the Project Manager said unto the Chief Programmer: "Create for me a schedule, so that I may look upon the schedule and know the Due Date". And the Chief Programmer went among his staff and consulted with them. And the staff was divided into two parts, one part was called "Analysts" and the other part was called "Application Programmers". And the Analysts went back to their desks and estimated, as was their custom. It came to pass that each Analyst brought his estimate to the Chief Programmer, whereupon he collected them, summarised them and drew a PERT chart.

AND the Chief Programmer went unto the Project Manager and presented to him the estimate saying: "It shall take 10 months." And the Project Manager was not pleased and said: "I have brought you up from the depths of the staff: you have not grasped the Big Picture." And the Project Manager hired consultants, and authorised overtime and he spoke to the Chief Programmer: "Behold, see all that I have done! The Due

date will be in five months." The Chief Programmer was much impressed and went from before the Project Manager and Proceeded to Implement The System.

AND the Chief Programmer said: "Let there be Reports, and there were Reports. And the Chief Programmer looked upon the Reports and said: "The Due Date was not to be." And the Chief Programmer pressed his suit, and his beard and went unto the Project Manager and said: "And the Chief Programmer pointed his fingers, and blame to issue forth in manner of creatures from Hardware and Software: the Chief Programmer's an extension.

AND the Project Manager was exceedingly and cast doubts upon the Programmer's answer. And he said: "I am not to pass that a mission was granted. The Chief Programmer took the staff back to the programming and there was much weeping and the programming was completed. And there was a Payday and the Happy Hour, a fifth month.

AND the Chief Programmer said: "Let the Mission be integrated, one with another. And System Testing may be. And it was so. And it came to pass that System Testing was completed. And there was a Payday and the Happy Hour, a sixth month.

THEN the Chief Programmer said go to the Project Manager and said: "Behold! I bring you good news of great joy which will come to all the Users, for on this day the System is completed. And there was a Payday and the Happy Hour, a third month.

AND the Chief Programmer said: "Let the programming be started and let much overtime be consumed, for there

## SOFTWARE FILE

# Powerful version of IDMS launched

A NEW high-performance version of its database management system IDMS has been announced by the Cullinane Corporation, together with a data communications product and major enhancements to its Culprit report generator.

The company has at the same time revealed that it is to take over Mentel Inc, a small Californian software products company. The acquisition is the first to be announced since Cullinane's highly successful launch on the US Stock Exchange earlier this year (Software File, August 17).

Mentel's products, which Cullinane plans to integrate with IDMS, include systems for interactive text editing, word processing, and online program development.

Greatly enhanced efficiency in teleprocessing operation is the main feature of the new IDMS release, numbered 5.0. At field test sites, the enhanced software has achieved reductions of up to 80% in terminal response time, and 50% in elapsed execution time.

Much of this improvement can be attributed to the introduction of full multi-threading operation, the same innovation made by Cincom in its latest IBM-mainframe version of IDMS, mainframe version of IDMS, numbered 3.0 (Software File, June 15).

Also contributing to faster execution is the provision of record level lockout. Protection against concurrent updates was previously implemented by locking at "area" level, which greatly increases the frequency of contention.

Other notable features of the new release are automatic recovery, warm restart, disc journaling, additional utilities, and an extended set of operator commands.

The new release also includes the nucleus of IDMS-DC, a teleprocessing monitor due to be released in the UK in the middle of next year.

Cullinane, which has not previously offered its own TP monitor, is understood to have implemented around 80% of the program handling task in the IDMS itself. The remainder, together with routines for mapping and screen handling, will be implemented in IDMS-DC proper.

A spokesman for Scicon, Cullinane's UK agent, noted that integrating TP monitor functions with the DBMS made possible a number of efficiencies, such as a single log file for both systems.

The DC nucleus functioned as a wait dispatcher and resource controller, he said, monitoring all online database activities and facilitating multi-threading. It would not, he added, duplicate the functions of existing TP monitors already installed, such as CICS or Shadow.

Enhancements in Release 4.5 of the IDMS/Culprit report generator include greater efficiency during multiple-report runs, greater use of the Integrated Data Dictionary, and increased flexibility for database reporting.

A new facility is the ability to generate data definitions

## MoD contract for Scicon

SUPPORT for the WG34 helicopter development is to be provided by Scicon Consultancy under a contract awarded by the Ministry of Defence. The firm is to build mathematical models simulating the operational characteristics of the helicopter.

The models will describe the performance characteristics of navigation systems, sonobuoy monitoring, tactical data handling and torpedo deployment patterns and overall system effectiveness.

## ICL's 2900 Cobol may be adapted for 1900 series

ONE of ICL's "superstructure" products for the 2900 range, the C2 Cobol compiler, may be adapted by the company for its older 1900 series machines.

Users still developing 1900-type systems, whether for a 1900 or a 2900 under DME, would thus have the opportunity of writing forward-compatible application programs and minimising future conversion effort.

A 1900 version of the C2 compiler, which is said by VMW/B users to be of a very high standard, is reported to be under consideration by ICL as C2\*.

Such a development would not only ease the migration path to 2900, but would also, in the view of one user, make available an excellent piece of software to continuing users of the 1900 range.

In contrast to its native mode operating systems for the 2900 series, which have attracted serious user criticism, many of the software superstructure products have been highly praised. Other language processors to have been specifically acclaimed include the Fortran F1 and OFC compilers (CW, February 16).

**IBM release**  
 AN online query system originally developed by IBM as part of its relational database project, System R, has been released by IBM in the US as an installed user program. The software, Query-by-Example, is said to run under VM/370.

# Yesterday's branch office

# Today's\*

Up 1.50

Branch office of the future, but available now: the Model 745 Portable, from the "Silent 700" series of electronic data terminals. It gives representatives immediate access to computerised data wherever there's a telephone and power point.

Just plug it in, link it to a phone handset and the 745 is ready to send or receive up-to-the-minute data. You can then make instant decisions based on reliable, accurate information.

In your customers' offices, for instance, the 745 can enter sales orders or print out complete reports in seconds on your stock, delivery times, prices or detailed quotations.

You can buy the 745 at attractive prices, or use our flexible leasing programme. And you can depend on responsive support from TI's national sales force, with additional back-up from its distributor, TI Supply, to handle small quantity immediate deliveries.

The 745 means change to greater efficiency and profit. Learn more. Call the nearest TI office, or complete the panel and send it now.

\* And we mean today. The 745 is available immediately. Just fill in the coupon and send it now.

MALCOLM PELTU REPORTS ON THE 'BIRTHDAY' SPEECHES OF ICL's TOP TWO

# Dr Wilson prescribes more Euro comms investment

URGING more co-ordinated European action across a wide spectrum of policies relating to information technology, ICL managing director Dr Chris Wilson last week stressed the importance of the development of European communications services with adequate high bandwidth capabilities and the establishment of a secure European source of advanced silicon technology.

The development of the right communications infrastructure is vital, he said, if the advantages of information technology are to be sufficiently exploited in Europe. However, he believes "previous efforts by European PTTs in this area have quite frankly left a great deal to be desired."

He also said, "We must make sure that European sources of technology are available. Total or over-reliance on foreign sources for technology is only a short step from similar reliance on the finished product."

Speaking at a Press briefing to celebrate ICL's tenth anniversary, Dr Wilson concentrated on his vision of how "data processing and informatics" will affect the way society develops.

Central to this vision was the creation of a "World" in which the integrated television display with its own processor and file storage becomes as much a part of the home as the telephone.

This type of device, he said, will provide the home of tomorrow with most of its communications with the outside world and highlights the importance to modern industrial

society of having the most advanced communications capabilities, in particular the availability of high bandwidth systems, possibly using fibre optics for all telephone/television users.

"Communications is a fundamental need of any society," he said. "This means that the communications revolution must go hand in hand with the processing revolution made possible by silicon technology; and with the equally revolutionary changes in information storage technology currently being developed."

Dr Wilson did not refer to this report but he is obviously keenly aware that the challenges facing ICL over the next decade are likely to be very different from its first ten years, with the complex and unpredictable impact of information technology creating new market opportunities as well as new competitive challenges.

In the past, he admitted, circumstances had compelled ICL to take a very day-to-day approach to running its affairs. We have had to pull ourselves up by our bootstraps.

Now, however, he said that ICL was in a "sound take-off position and can begin thinking

about changes in information storage technology currently being developed."

There were many complex implications resulting from the new integrated information services that are being developed.

For society, Dr Wilson said, "most important of all is the establishment of a truly effective body of European law governing those topics which are of legitimate public concern and which have a special relevance to the informatics community and those affected by it."

"What we do not want to face is a mass of unco-ordinated national laws and regulations in this area. They would slow down the general progress of all of us through our legislators failing to understand the realities of the situation."

The areas identified by Dr

Wilson for concerted European legal action include privacy and the protection of the individual against infringement of personal liberty, fraud prevention, electronic funds transfer, transnational data flows and copyrights and patent agreements.

An indication of the commercial reality behind the kind of development envisaged by Dr Wilson was highlighted by a recent report from US consultants International Resource Development Inc which predicted that the market for integrated Video Terminals, of the home-based communications system described by Dr Wilson, would eventually amount to "billions of dollars" (CWI, October 12).

And that report suggested that the market for IVTs would be dominated by computers and electronics manufacturers, such as IBM and Texas Instruments, rather than by traditional TV makers.

Dr Wilson did not refer to this report but he is obviously keenly aware that the challenges facing ICL over the next decade are likely to be very different from its first ten years, with the complex and unpredictable impact of information technology creating new market opportunities as well as new competitive challenges.

The areas identified by Dr

As much part of home as telephone  
Dr Wilson - 'creation of world in the home' is the integrated television display with own processor and file storage becomes as much a part of the home as the telephone

proposals of the US telecommunications giant, AT & T for its Advanced Communications Service (CWI, October 26) as being on the right lines.

But he accepted that to support an advanced communications network requires high bandwidth capabilities which must "involve major public investment."

Dr Wilson therefore hoped that the subject would "hit the headlines more often with the social benefits being made very clear."

Addressing an audience of journalists from UK national, local and technical papers, Dr Wilson frequently stressed the role he believes the news media could play in creating a better and more informed understanding of the complex issues posed by information technology.

The information processing industry, he said, would provide increasingly efficient and effective technological capability but he challenged those in the Press, radio and TV to "penetrate the understanding, the discussion and the general will and desire to benefit from what can be provided for the enrichment of our lives."

While accepting that recent reporting on television on the

impact of the micro had created considerable public and political interest and debate, the effect of the debate had been to create a "certain amount of alarm and despondency" to some extent by the emphasis in the programmes that the micro has made possible must be spectacular advances: automation overnight and the

whether society can absorb the social consequences of its rapid developments.

But, Dr Wilson said, the situation is more complex. In-depth judgments on the micro's impact are not possible. "I think that automation develops by leaps and bounds, and the numerous problems that need to be solved."

Eventually he believed that the pace of automation developments would accelerate dramatically but "in the meantime we have a break space and must make the most of it."

Dr Wilson said he believed himself that the alarm about the impact of the micro is understandable but does not reflect reality. "I think that automation develops by leaps and bounds, and the numerous problems that need to be solved."

Eventually he believed that the pace of automation developments would accelerate dramatically but "in the meantime we have a break space and must make the most of it."

## MICRO NEWS

# Mystery over IBM RAM development

THE introduction of System 38 by IBM, heralded on the heels of the 8100, has thrown another spanner in the works of guessing just what the company is doing in the development of high capacity random access memories. To add to the 64K and 18K devices introduced with the 8100, the System 38 is to incorporate 32K devices, together with a new bipolar, LSI logic array chip.

The problem with these devices is that IBM is unwilling as yet to issue any other information than that they exist. This is diametrically opposed to the normal behaviour of the semiconductor industry which tends towards a freedom of information that can, on occasions, even cause later corporate embarrassment.

Industry observers, especially in the US, have however extensively analysed the little information that is available, and have come to the following conclusions.

Firstly, the chip is very large. This is based on perhaps the first piece of evidence that exists, a photograph of the chip (right) provided by IBM.

According to one observer, Iken Rosen of stock analysts, Morgan Stanley in New York, relating the chip shown to the number of skin ridges on the fingers supporting it indicates that the chip is somewhere between 59,000 and 67,000 square mils in area. This is around twice the size claimed by Texas Instruments for its own recently announced 64K part.

The photograph also provides evidence to suggest that, as a major US memory user put it, "IBM's design is primitive".

This is based on the ratio of storage area (the regular pattern down the sides of the chip) to peripheral and logic circuitry. The normal ratio from the semiconductor industry is around 60:40, storage to peripherals. In the IBM part, this ratio seems to be reversed.

Coupling this with the little information provided by IBM as to the manufacturing process of the RAMs points, according to Rosen, to an attempt by IBM to use an obsolete manufacturing process.

The statements from IBM include "n-channel metal gate FET", "silicon nitride", and "conductive field shield". The metal gate and nitride characteristics are features used for some time by IBM in the production of its major RAM product, the 2K part.

These three points strongly towards an old, and now out of favour metal gate process. As an example of its obsolescence,

Kosen states that this same approach was taken by Mostek in the development of its own original 4K RAM. This part, the 4098, has since been superseded by a re-engineered part, the 4027, and is ending its final production runs about now.

There is according to Rosen, evidence to suggest that IBM recently went "shopping" to buy a new MOS process, but that no deals were made, and that having proved that it can make devices using the older metal gate process with the 2K part, has opted to force it up in device complexity.

The final clue comes in the "guessed" access time of the 64K RAM. As the part is to be used only in the slower 8130 system, rather than the faster 8140, the industry speculation is that the IBM part has an access time of around 975 nanoseconds. This, as Rosen points out, "is a rather pale shadow of the 110 to 150 nanoseconds of merchant market parts".

As a final thought on IBM's position on RAMs, the old process technology, and large chip size should mean, in relation to current semiconductor manufacturing practice, that the parts should be almost non-productible. Rosen points out, however, that IBM's history in semiconductors has repeatedly demonstrated that the company can achieve cost-competitive memory products, despite such disadvantages.

An equally small amount of information is available from the company on the new LSI logic device being used in the System 38 processor.

What is known is that it is a bipolar device that is constructed as 704 TTL circuits on a single chip. This tends to indicate that IBM has selected an array circuit design technique, such as has been used for several years by Ferranti, with its uncommitted logic array devices.

This suggestion is borne out by the IBM statement that the circuit designer specifies the interconnections between the 704 circuits on the chip to meet particular system needs, this data being used for subsequent mask making.

It is further borne out by a comparison with Ferranti's latest LLA range, the 6000 Series. Ferranti's device, at 484, has a lower "circuit" count, but it does have to cope with a wider variety of applications requiring a greater number of different circuits. It also has 48 interface circuits, of which no mention is made by IBM.

The nominal speed quoted by IBM is between 3 and 5 nanoseconds, compared to a typical 8 nanoseconds from Ferranti. Chip size for IBM is around 33,000 square mils, while the Ferranti part is a little larger, at 35,000 square mils.

The RAM guessing game... IBM only provides this photograph as a clue to what it is doing in the development of high capacity random access memories.

The RAM guessing game... IBM only provides this photograph as a clue to what it is doing in the development of high capacity random access memories.

The RAM guessing game... IBM only provides this photograph as a clue to what it is doing in the development of high capacity random access memories.

## Single board for \$279

THE price of personal computer hardware continues to fall. For the US company, Ohio Scientific, has introduced a single board system that includes an 8K Basic in ROM, and an integral "querry" keyboard for \$279.

Known as Superboard II, the board includes a MOS Technology 6502 microprocessor, 8K bytes of static RAM, a video display interface and a Kansas City audio cassette interface.

Its one obvious disadvantage is that it is being sold without a power supply. However, the company states that any 5 volt DC, 3 amp supply will power it. For the non-handyman, the company is also packaging the board, with power supply, in a

case. This is being called the Challenger II, and has a price tag of \$499. For both versions, the company points out that export prices are slightly higher.

The video display capability provides upper and lower case characters, graphics and gaming characters for an effective screen resolution of up to 256 x 256 pixels. On a TV display, this can provide up to 30 x 30 characters.

Available options include an expander board that features 24K bytes of static RAM, a dual mini-floppy interface port adapter and the company's own 48 line expansion interface. A complete software library is also available. Deliveries are scheduled to start in December.

## Edited by Martin Banks

# Complete look at semiconductors

THE complete works of the semiconductor industry in the production of integrated circuits, is how the IC Master reference book could be described, covering as it does virtually every common type of circuit available.

Unlike other reference books on the micro, the IC Master has the advantage of providing a potential single source for information on all the components needed for the development of microcomputer hardware, rather than just the microprocessors themselves. The importance of this lies in the fact that for every microprocessor used, there is a vast number of memory and peripheral circuits required.

Divided into broad product categories, the book then uses a major specification criterion as the key to finding specific products to suit a given requirement. For example, in memories, the main key is the basic type - ROM,

PROM, RAM, etc, followed by device organisation - 1,024 x 1, 4,096 x 1, etc.

The cost of IC Master, which is published by UTP of New York, will be £49.50 for the 1979 edition. A prepublication price of £39.50 is being offered until January 31, 1979. It is available from Watts-Steadman and Partners, Safron, Walden, Essex.

## Bleasdale courses to cover T1 16-bit chips

EXTENDING his horizons in microprocessors is Eddie Bleasdale, managing director Bleasdale Computer Systems. Up to now a strongly Motorola-oriented operation, his company is now extending its range of courses to cover the Texas Instruments TMS9900, 16-bit device.

Two courses will initially be provided, covering the fundamentals of the device, and designing systems using the part. The former, a one week

course, will cost £235 and the latter, running for two weeks, will cost £470.

So far, each course has been scheduled for six runs during 1979, complementing Bleasdale's existing schedule of courses on the Motorola 6800 microprocessor.

More details can be obtained from the company at 7 Church Path, Merton Park, London, SW19.

## Here's your through-ticket to MVS

MVS is tomorrow's direction. That's the IBM line.

It's great to arrive but it can be a fearsome journey if you travel alone. We should know. We were first in Europe.

Since Datasolve came to MVS four years ago we've been the navigators for dozens of other companies who wanted to travel the same route.

Helping them gain MVS experience on our large IBM and Amdahl computers before letting them strike off on their own. Allowing them to build up MVS momentum to a point where their own operation could take over.

Giving them expert technical assistance, comprehensive MVS training and the benefit of our special MVS services like TSO3, the interactive program development aid to conversion. Datasolve will help you plan and administer your MVS itinerary, with the understanding, experience and cost-effectiveness that only Britain's most seasoned MVS travellers can provide.

Whatever your route to MVS, Datasolve is just the ticket.

## 'System 4 should have been killed'

PUTTING a retrospective boot into the amalgamation of ICL and English Electric Computers to form ICL, the ICL chairman Tom Hudson said last week that the merger should never have taken place - and once it did, System 4 should have been killed.

At the time of the merger, in 1968, he had advised the company to drop System 4. There were, he said, obligations to Sys-

tem 4 customers which gave the new company inherited commitments of about £8 million to develop new operating systems for System 4 and that English Electric did not have a strong organisation backing up the range.

In a remarkable speech at ICL's tenth birthday "Press party", Hudson veered from his prepared speech to make his stinging attack on System 4, as well as juggling his remarks with some observations on ICL's early troubles and on politicians and former ICL managing director Geoffrey Cross.

But his strong criticisms of System 4 were the most surprising, as the intermarriage of the early years of ICL, with many English Electric even regarding the merger as a takeover by ICL, had largely been forgotten over the last few years when ICL began to emerge more as an entity in itself.

The merger, said Hudson, had cost about £80 million in trying to iron out some of the problems of System 4 and in trying to integrate the organisations and product lines. "If I had been chairman at the time, I would have killed System 4."

Two major System 4 operating system developments in development at the time of the merger were Multijob and a system code named System R which was absorbed by ICL before it became publicly available.

Commenting on his speech, some ICL employees said that Hudson failed to point out that many of the people working on System 4 operating systems have played a major part in the design

and development of the VME/R operating system for the 2900 series.

Whatever else, the employees pointed out, the merger threatened to destroy ICL's pool of talent - a skilled staff, said, and Fred Langford recently pointed out (CWI, October 18) there is an argument that ICL could have made better use of System 4.

Hudson also said the decision to go ahead with the 2900 could be described as "a simple foolhardy" because it was the kind of ambitious project which could so easily escalate.

"But once you get involved in a project like this there is only one way to go - and that is forward," he commented.

However, he added, "the payoff is becoming evident". For having been an industry leader in designing a new range "from the ground up" and he predicted that other manufacturers, including IBM, will suffer "growing pains" in the future as they try to introduce new ranges.

He also recalled that he had hesitated when he was asked to become company chairman in 1972 because he believed that the company had "dated" since its inception and that it was then in a "precarious state."

Turning to politicians, he commented that people such as Harold Wilson, Tony Benn and Frank Cousins, were all now eager to claim that it was they who had been responsible for establishing ICL, adding that ICL is now a financial success story.

But many of the same politicians, he said, were also eager to disclaim responsibility for unpalatable events, such as the

decision to sanction buying. Frequently emphasising his own strong involvement in the merger, Hudson said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

He also said that he had not been involved in the merger until after the merger had taken place.

Maintenance is something we all tend to take for granted: it is something which just happens, like the weather. Occasionally the service provided is excellent, most often it is just adequate, and users grumble about it but accept it. The fact that any company might actually carry out a continuous and intensive examination of its maintenance operation, constantly striving to increase customer satisfaction even if only by a percentage point or two, is almost inconceivable.

But computer companies do take maintenance extremely seriously, even if few can boast maintenance fanatics quite as single-minded and enthusiastic as Pier-Carlo Falotti, head of maintenance for DEC in Europe. Tim Palmer reports from Geneva.

● This is the interior of DEC's European repair centre for faulty modules brought back from customer sites by service engineers. The centre, at Hoofddorp, Holland, brings all returned modules up to the latest specification, after which they are returned to regional service centres to be used again as required.

Tim Palmer talks to DEC's European customer services boss Pier-Carlo Falotti

## Promising is one thing— deliver is something else

"PROMISING is one thing—delivering is something else." That is the uncompromising dictum over the desk of Pier-Carlo Falotti, European manager of Digital Equipment's customer services organisation in Geneva.

Falotti is passionately dedicated to improving service to DEC's customers throughout Europe and the evidence suggests that this vital, but much neglected, aspect of the computer business is really getting better for DEC users.

"You reported in Computer Weekly a few months ago that IBM users were satisfied with IBM customer engineering, and quoted a satisfaction figure of seven out of 10.

"I was a little concerned at the report (CW, May 4), because our customer satisfaction rating—over a much larger sample than IBM's—averages 7.4 out of 10 in some countries and, at worst, is 7.1."

DEC has been conducting customer satisfaction surveys on its maintenance operation for four years throughout Europe, and for six years in some countries.

"We have consistently asked the 10 same questions, and four years ago, the rating varied between 5.8 and 8.2, so there has been a consistent improvement. The questionnaire is sent out to all our customers, and we get a 48 to 50% response, which represents about 5,000 replies.

"We do a computer analysis of the replies and classify them by product and by type of customer. We are getting a particularly high rating from our 'critical' customers, those with applications for which downtime is materially damaging.

"Such customers have a superior maintenance contract which guarantees a better response time and 24 hours a day service compared with the standard contract."

"That sounds encouraging, but Falotti is never satisfied with anything less than perfection. The rating should be the same regardless of the type of maintenance contract, because those with the standard contract have lower expectations.

"I will never be satisfied with anything less than 10 out of 10, but I know we can never achieve that: customers tend to be exigent when they fill in questionnaires.

"On the other hand they tend to mark people-related questions higher than impersonal ones, because they don't like to say nasty things about the guy who comes to visit them."

This can be seen from a detailed breakdown of the figures. Customers are asked to circle digits from zero to 10 against

each question, and are told that zero means unacceptable, five means average and 10 means outstanding.

The highest rating, 8.5 from those with critical contracts, is given for "attitude of engineer"; next highest is competence of engineer, rated 7.5 for both types of contract.

At the other end of the scale, lowest mark, 6.5, is given for preventative maintenance on standard contracts, and this also rates low at 6.8 with critical contracts. The lowest rating in the latter category is for repair time, which is rated 6.8 out of 10. Availability of spares is also rated low at 6.8 by both sets of customers, and looks like an area where it would be comparatively straightforward to improve the rating next time.

The other categories, each of which is rated 7 or better by both

blem and our biggest challenge, and our rate of growth makes it worse.

"We can still find trained people in the UK, which is why we have a service organisation there which is more than twice the size of those of all other minicomputer manufacturers put together—including IBM's Service 1.

"In France we recruit from a national training school for people wanting to go into electronics, and in Germany from the Control Data Institute. We then teach them general computer science, trouble-shooting and English.

"We recruit between one in 10 and one in 20 of the candidates we interview, and each is interviewed by at least two people. As a result, only IBM has a lower turnover of staff.

"In Italy we advertise, and offer a grant during training. We

Falotti... I will never be satisfied with anything less than 10 out of 10, but I know we can never achieve that: customers tend to be exigent when they fill in questionnaires.

sets of customers, are overall quality, which gets 7.2 on standard and 7.4 on critical contracts; response time; overall reliability; and field service management.

Falotti is convinced that far from being a fringe activity, quality of maintenance can make the difference between winning and losing business.

"Maintenance is a pre-dominant cost, and so serviceability of a product is also crucial. Good preventative maintenance can improve the reliability of a system, but you have to weigh up the costs of too much downtime with the costs of too much preventative maintenance, and the crossover point of the two curves is different for each model.

"People are of course what a good maintenance service depends upon. People are our biggest pro-

average 300 replies and 12 recruits per advertisement.

"We have specialised training schools, one for CPUs, another for mass storage devices and a third for systems.

"The students start with a spell in the office to get the feel of things, then do a month in class, covering basic appreciation and basic trouble-shooting.

"Over the next three months they are allocated according to aptitude, and spend half of each day doing a self-paced instruction course. So they do not have to spend three of four months sitting in class."

DEC's service business is organised as a world-wide profit centre. "That way, we have the resources we need for investment where it is needed, and ensures that we get our priorities right."

"Traditionally maintenance has been a hardware special-

tion, but at the higher end of the line, maintenance engineers have a system rather than hardware orientation. The emphasis has switched from software to nearer 50%—after all, if customers use DECnet, we have to have engineers who understand DECnet.

"This provides a clear career path, because there are new specialisations which used not to exist.

"We have a world-wide engineering review board which assesses the capabilities of an individual, and people move to become systems and application engineers designing, for example, networking systems."

"We do find a difference between different countries: people from the Mediterranean area tend to want to end up as a boss, whereas Americans do not. But passing to a higher level via the review board offers a means of giving individuals enhanced status."

With a significant number of multinational customers like Chemical Bank, DEC maintenance engineers are often travelling from country to country, which raises some major problems.

"We have an international network of spare parts which is maintained according to the rate of consumption, and we used to transfer the data on stock levels and so forth by means of magnetic tape. But it is getting harder and harder to transfer data across borders so we are going to have to find another way to do it. Similar problems arise when engineers try to talk parts through customs."

"As long as parts can be found, we will go on maintaining old machines. In Salem, Massachusetts, which specialises in making parts for obsolete products, including those which we used to buy from companies which have since gone out of business."

"In Europe, we also have a central module repair facility in Holland.

"Each module sent there is updated to the latest revision, goes through the full test sequence, a success rate of 98% is achieved, and the module is then sent back to the factory and not unpacked until it is withdrawn from stock."

A new service contract has been introduced, which will be a remote diagnostic service, like the PDP-11/20, which will enhance further the service to the customer (CW, October 1978).

This is the third in a short series about the BCS Specialist Group. John Race, a senior lecturer in computer science

at Brunel University, outlines the activities of the Microprocessor Specialist Group, which will be taking

part in the BCS 79 Living with Computers conference and exhibition in London from January 4 to 6.

## BCS group assesses the impact of the micro

MICRO-ELECTRONICS and microprocessors are, arguably, the biggest things in computers since the transistor. Their effects on hardware and software are already profound, and may extend out of our own profession to change the jobs and lives of everybody.

The Microprocessor Specialist Group was inaugurated in November 1978, with the aim of exchanging information on hardware and software developments and applications in programmable micro-electronics; promoting the use of relevant software methodologies and techniques; and assisting members in dealing with suppliers and distributors of micro-electronics.

We try to achieve these by holding meetings, about five times a year, at which an out-

At BCS 79 the Microprocessor Group will exhibit various working devices and there will be discussion on the impact of micro-electronics, led by Derek Roberts, managing director of Plessey Micro Systems; Alex d'Agapeyeff, chairman of CAP; and Keith Chapple, managing director of Intel UK.

It is expected to cover such topics as: should the UK concentrate on using micros, making them or developing software for them?

You are invited to join our meetings and information can be had from the BCS (01-637 0471).

When considering the impact of microprocessors there seems to be three possible areas of discussion: The impact of micros on life in general, on the UK economic scene, and on the professional.

In dealing with the first, a vigorous but emotional debate has begun on the impact of micros on the quality of life. We are fairly sure they will be as influential as stents, cheap electric motors, and transistors.

We can say, too, that the computer professional has perhaps more responsibility than most, and should act as a watchdog, giving warning when his devices look like turning antisocial.

This topic is splendid for debating, but at present involves more speculation than calculation.

In respect of the UK economic scene, the issue seems to be, what priorities should be given to manufacturing micro-electronic components; developing software and systems using foreign components; using foreign software systems and components in our products and processes?

Arguments for the first are increased employment, decreased reliance on foreign imports, hence a better balance of payments and less chance of political blackmail, and a chance of commercial success. The arguments against are that we are late in the field, and that our market is smaller than that open to the US manufacturers.

The arguments in favour of the second point are that our costs are low and our skills are high in putting together packages for other countries to use.

John Race

relative speaker reports on his company's or institution's activities and plans in the field.

Our policy has been not to try to devise or impose standards in this field, or to take sides in the debate on whether microprocessors are a curse or a boon to the computer professional, the manager, and the man in the street; nor have we yet published anything. Instead, we try to educate ourselves by listening and talking.

Non-members of the BCS are welcome to our meetings—everyone pays 50p at the door. It should be noted that membership or affiliate status is, however, worth having: for example, the cost of attendance at BCS 79 is reduced by more than the cost of becoming an affiliate.

### Now Fairchild sues DG

THE long-running litigation between Data General and Fairchild has taken a new twist, with the news that in the San Francisco Federal Court, Fairchild is counter-suing Data General, alleging an attempt to prevent competition.

This follows a suit from Data General against Fairchild (CW, May 12, 1977) which has alleged misappropriation of trade secrets and violation of software licence agreements between the two companies.

Earlier this year (CW, May 4) Fairchild replied to the Data General charges, and asked the

Delaware Chancery Court to dismiss the case.

The subject of the suit and counter suit is Fairchild's 9440 16-bit microprocessor, which can emulate the Data General 1200 computer. Data General allege this is a violation of trade secrets, Fairchild, in its counter-suit, allege that DG's suit is "an attempt to impede a natural and highly useful course of technological development and advancement."

Fairchild has under development a new micro, the 9445, which, it is suggested, will emulate Data General's Nova 3.

### Package for architects

A SMALL hardware and software package aimed at architects, engineers and surveyors has been introduced by the Royal Institution of British Architects with a view to easing the design task involved in assessing energy efficiency in buildings.

The package is based on a Texas Instruments TI-99 calculator, coupled with a PC100B print cradle. The software is a

suite of nine programs written by the RIBA Energy Group. The first of these will calculate thermal efficiency in buildings.

The energy group, Pat O'Sullivan from UWSI, architect Richard Burton and RIBA energy consultant Will Pascale, are committed to expanding the range of programs available as part of the package, and are looking at such areas as acoustics and daylight factors.

A new line of calculators with plug-in function modules has been introduced by Monro International, a division of Litton Industries. Called the Monro 2850 series, there are six models, ranging in capabilities from a simple printing calculator up to the 100-step programmable/printing machine which also has 48 registers that retain data in memory even when disconnected from the mains power supply. Nine different function modules are available, allowing the user to build up his own personal library of capabilities. The picture shows the Monro 2850 with its easily changeable function modules.

## COMPUTEL GIVES 1900 USERS AN EVEN BETTER DEAL WITH THE NEW ORANGE 1900

Here's great news for all 1900 users.

Computel, who have always prided themselves on offering their clients the best and the latest, now have an orange 1900.

It consists of an ICL 2960 running under the Direct Machine Environment operating system.

The advantages to both existing and new clients are impressive.

It extends the life of existing 1900 software.

It offers greater throughput, faster tape system, larger discs, greater reliability and resilience.

It has twice the on-line

filestore capability.

If you have a large program you will particularly benefit from the increased main store and speed of throughput.

With all the existing advantages offered by

Computel we think you'll agree 1900 users never had a better opportunity.

Why not find out more by sending off the coupon or ringing our Sales office.

Where we build on experience to set the pace.

For the attention of Tony Matthews. Please tell me more about the benefits of using the Computel Orange 1900 service.

# New light on transmission of information

THERE is nothing new about the idea of using light to carry vast amounts of information. In the nineteenth century, Alexander Graham Bell was keenly interested in the basic concept of optical communications, and he experimented with what he called a "photophone", a system for carrying messages by means of sunlight reflected from mirrors.

However, two research breakthroughs were needed before optical communications could become practical. The first was the discovery of a suitable light source. Light from the sun or lamps cannot provide the concentrated narrow band of frequencies necessary for communications applications.

The answer came in 1960 with the first demonstration of the laser, a device which gives off a concentrated beam of light at a single frequency.

The second major breakthrough was the discovery of how to make a suitable optical transmission medium. Transmission of light beams through the atmosphere is severely limited by fog, smog, rain and snow.

However, specially made glass fibres can trap light waves and carry them for several miles with little loss in signal intensity.

Today's fibres are so transparent that light loses more intensity passing through an ordinary window pane than it does in 500 feet of fibre. Put another way, if seawater were as transparent, one could easily see to the bottom of the deepest ocean.

In terms of system components, optical links are no different from any other communications setup. You still have a transmitter, a transmission medium and a receiver.

The transmitting source may be either a solid-state laser or a high-radiance light-emitting diode; the receiver uses a photodiode, which is generally a silicon avalanche photo-diode.

What makes optical transmission so radically different is the fact that it substitutes a stream of photons for a stream of electrons. This means that the optical circuit is totally isolated electrically, so it is immune to electromagnetic interference, does not generate inductive crosstalk and is not susceptible to the crosstalk of neighbouring copper circuits.

There is no need for extensive earthing loops or bulky cable shielding, and short circuits are harmless, even in an explosive atmosphere.

Further, since signals do not radiate from fibre cables, they resist intrusion. A simple, well-designed cable would have to be broken into for an intruder to gain access to the information. Also, the very weak dependence of optical loss on frequency and temperature simplifies the design of receiver electronics since no equalisation is required.

Optical fibres have the advantage of being thinner and lighter than copper wire, yet they have the tensile strength of steel. They also have a far larger information transfer capacity than copper wires.

A single fibre has already carried more than 30,000 telephone messages over a distance of six

miles in a demonstration and the theoretical capacity of the fibre is on the order of 1,000 Mbps.

There is another good reason for switching from copper wire to optical fibre in view of the growing strategic importance of copper as a scarce raw material.

Despite these benefits of optical fibres, none of them warrants the effort required to develop fibre optic technology, in the view of Dr R. D. Maurer of Corning Glass Works, Corning, New York. To him, cost has always been the dominant motivating factor.

Fibre costs have dropped dramatically to about \$1.25 per metre, but this figure is still high because of the laboratory environment in which fibres are made.

Assuming a normal operating plant production environment, Dr Maurer believes that present technology can reduce the cost to 10 to 20 cents per metre for annual production volume in the

total attenuation of 30 dB/km. Subsequently, Corning reduced fibre losses to 8 dB/km, and in May, 1973, Bell Labs scientists announced glass fibres with losses as low as 5 dB/km. At this level, attenuation in the fibre accounts for 50% of light loss over a distance of 2,000 feet; this meant that repeaters in a fibre optic system could be placed further apart than repeaters in the land cable systems then in service.

Corning later reduced attenuation to 4 dB/km and in May, 1974, Bell Labs reported losses as low as 1.2 dB/km at the infra red wavelength of 1.06 micrometres, or microns. Now, Corning can produce kilometre lengths of such fibres. The lowest attenuations reported have been about 0.5 dB/km.

To obtain such high transparency, optical fibres are designed so that the light never comes near the outside surface

of the fibre. Rays reflected back into the core at the first encounter with the interface will continue to be reflected along the length of the fibre.

Light rays that enter parallel to the central axis of the fibre will normally travel a shorter distance than those entering at an angle which cause them to side as they travel down the fibre. As a result, a light pulse made up of a combination of rays becomes spread out over time.

This phenomenon, known as modal dispersion, limits the pulse rate, and thus the information capacity of the optical communications system. The dispersion can be greatly minimised, but not entirely eliminated, by grading or shaping the refractive index of the core to compensate for the different distances that the rays travel.

## By Morris Edwards

Ever since the development of electrical communication methods, work has gone on to improve the quality and the capacity of the transmission medium. The use of light to carry information has been experimented with since the days of Alexander Graham Bell, but until the advent of the laser and the optical fibre this technique had not been practical. Now, communications systems based on fibre optics are becoming a reality and in this article Morris Edwards discusses some of the latest developments.

wavelengths, and since the refractive index differs slightly for each wavelength, their propagation velocities are different, so the pulse spreads out while passing down the fibre.

For sources with a large wavelength spread, such as light-emitting diodes, chromatic dispersion can limit system bandwidths and/or length. With solid-state lasers, which have a very narrow spectral spread, chromatic dispersion is negligible.

According to Dave King and Otto Szenesi of Bell Northern Research, modal dispersion in step-index fibres limits the maximum bandwidths to about 35 MHz-km. Writing in the February, 1977, issue of their firm's technical journal, Televis, King and Szenesi report that graded-index fibres may have bandwidths greater than 500 MHz-km, and they consider such fibres to be the leading candidates for communications applications.

One way to prevent modal dispersion is to limit the core size and core-cladding index differences so that only one mode is allowed to propagate along the fibre. Such single-mode fibres have been fabricated with bandwidths as high as 2 GHz-km, but their small core size creates difficulties in obtaining low attenuation.

The small diameter, about two to four microns, also greatly complicates aligning a light beam into the fibre and makes alignment and splicing of fibres extremely difficult.

Sources for optical communications systems may either be LEDs or lasers, both of which are comparable in size to the optical fibre, which makes for easier coupling. Both are also capable of being modulated at very high rates. Many modulation and coding techniques may be used, but the binary on/off modulation of the light source is the most practical. Analogue information, such as voice or video, must first be digitally encoded; it may then be transmitted, along with data, as a stream of light pulses through the fibre to the receiver, where the photo-diode reconverts the original electrical signal.

The wavelength of the light source greatly impacts the transmission performance. Light losses in fibres arise from two distinct effects. One is absorption of light by impurities embedded in the fibre material. These losses can be reduced, but it is difficult to eliminate them completely.

Another source of loss is scattering of light inside the fibre (Rayleigh scattering). This loss decreases continuously as the wavelength increases and reaches a minimum at wavelengths between about 1 and 1.2 microns.

Dispersion also reaches minimum values at wavelengths in the vicinity of 1.2 microns, so to keep both attenuation and dispersion as low as possible, the wavelength should be in this range.

LEDs made from gallium arsenide, GaAs, which emit at a wavelength of about 0.8 microns, are satisfactory. However, Bell Labs' Boyle reports that semiconductor materials

are under investigation which promise a better wavelength match for optical fibres.

Until recently, the only practical semiconductor laser for optical systems was the gallium arsenide laser, which emits a wavelength between 0.8 and 1 microns.

Research on new semiconductor materials at Bell Labs, however, has shown that adding antimony to gallium arsenide, an effective way to "tune" the laser. By increasing the amount of antimony in gallium arsenide antimonide, the light emission can be continuously tuned to any wavelength between 0.9 to 1.2 microns.

Already, such lasers have operated for as long as 21 hours, which is encouraging because GaAs lasers, which now have a life expectancy of over ten years, lasted only a few minutes in their earlier laboratory versions.

In a report entitled "Fibre optic communications", the National Research Council of Canada, compares light sources to dining to the report, since propagating many modes is well suited for multi-layers.

However, LEDs spread light over a wider angle than lasers, so less output power can be coupled into the fibre. The output of LEDs, however, is more linear than lasers, and LEDs can be operated continuously with little or no effect on their lifetime.

Lasers can be operated continuously too, but the cost is presently high and the lifetime is generally limited to 4,000 hours at best with commercial lasers. Nearly all of the commercial LEDs used for fibre optic communications systems are the Burrus diode developed by Bell Labs by C.A. Burrus in 1971.

Lasers have two main advantages as light sources. Because the light emerges from the laser in a narrow beam, it is possible to couple a large fraction of the radiation directly into the end of an optical fibre. Secondly, the small spread in colour of the laser light minimises chromatic dispersion.

In the receiver, photo-detectors capture the light emitted by the laser or LED source and convert them into electrons. There are two types of photo-detectors: "avalanche" photo-diodes, and silicon photo-diodes. The avalanche photo-diodes have a built-in gain, which makes them available for many applications since they respond to light wavelengths between 0.8 and 1.15 microns, which covers the laser and LED sources used in optical systems.

Photo-diodes have a built-in gain, which makes them available for many applications since they respond to light wavelengths between 0.8 and 1.15 microns, which covers the laser and LED sources used in optical systems.

Silicon avalanche photo-diodes have the advantage of being able to operate at rates up to 50 MHz using TIL technology. Since the avalanche photo-diodes have a built-in gain, they are well suited for applications requiring high signal-to-noise ratios. Their response time is also fast, and they are available in a variety of packages, including high power and high speed versions.

In 1977 Shell's heating and agricultural division placed itself in the vanguard of developments in the group by deciding to introduce distributed processing techniques to its

authorised distributor network. Following a detailed investigation in-house and a comprehensive study done in conjunction with the distributors, this decision has now been implemented in 18 out of an eventual 30-35 locations and has already met all its promised cost justification. This is the background to the distributed processing case study by Ruth Stein.

# Oiling wheels of a distributed net

## By Ruth Stein

THE heating and agricultural division handles all Shell's UK oil sales to the domestic central heating, agriculture, small industrial and commercial sectors of the market. This is channelled through approximately 45 authorised distributors, all substantial businesses in their own right, who cover specific franchise areas. A typical distributor, for example, handles 10,000 customers, employs 50 people and turns over approximately £5 million per annum. The division's association with this network is close, providing a number of service and support activities.

Computerisation was first introduced in 1978 when the division's routine data processing needs were handled by a leading bureau. This was designed as a single entry sales ledger system to control customers' accounts.

It required input data to be recorded on a batch basis and sent by post to the bureau where it was read optically and processed. Speedier than manual operations, it suffered from the inherent inflexibilities of batch processing.

In 1975 a look at Shell Canada's newly installed minicomputer as the catalyst for a full-scale reappraisal of the division's computing techniques. The bureau was anxious to enhance the batch system in order to eliminate sequential processes and some distributors were pressing for more sophisticated handling, in particular those companies with large customer lists.

The decision to implement a fully integrated real time minicomputer-based system was made after all other alternatives had been rejected. The major factors which led to this were the desire of the authorised distributors for their own systems, the favourable economics of distributed processing within Shell's own marketing structure and the marketing advantage such a system could provide in the increasingly competitive market.

The objectives of the system definition were to produce a workable system controlled by the authorised distributors at each location and generating as little paper as possible.

Routine operations were to include order capture and invoicing, the central heating and boiler maintenance service, customer accounting, customer master records, purchase ledger, automatic credit control and comprehensive retrieval facilities.

It was decided of the outset that interlinked systems were unnecessary, but that an online link with Shell's own computer centre could eventually be desirable.

The division did not have any pioneering instinct and mandatory criteria for the eventual choice of hardware were: known capability or implementation on the part of the contractor, the use of proven hardware and operating software and guaranteed maintenance and support.

The company was specific about its requirements: "A

multi-functional interactive real time computer system is one where all information necessary to process transactions is stored within the computer and is available for interrogation at all times to be used selectively and randomly to process all transactions required to conduct business.

"All functions of the system can be performed simultaneously through a number of VDUs with information being produced visually and/or in printed form. Response by the computer to any action initiated through a keyboard linked to a VDU must be less than five seconds in all circumstances and must average no more than two to three seconds."

When the choice of supplier was made, it elicited from a company which had already implemented a minicomputer-based system in a fuels distribution company and written special applications software. Computer Design Systems of Manchester proposed a DEC-based system operating under Mumps and a typical installation is now centred on a 98K-byte PDP 11/34 with 40 Megabytes main storage, eight to nine VDUs and four to five printers.

Two pilot exercises, at Pilot Oils of Nottingham and Fuel Services (Garstang), were in operation during the winter of 1978/77. A 100% DEC solution was soon found to be too expensive, although Shell would have preferred a single manufacturer, and experiments were made using different peripherals and terminals.

The choice of VDUs for the project was one of the most significant. There would ultimately be approximately 300 VDUs within the network, a factor which made selection particularly price sensitive, and these would most immediately represent the total system to the user. This meant a simple, rugged device without any complex capabilities.

The success during the pilot installation of the ADDS Consul 520 from Terminal Display Systems was sufficient to ensure its recommendation from CDS and the distributors involved in using it.

One great advantage of the ADDS terminal was its acceptability to users. It appeared to need little maintenance and its dark-on-light screen was comfortable for people to operate. Its UK supplier was a specialist in VDUs and was local to CDS.

The benefits highlighted by the pilot scheme results were the ability of the companies concerned to take a more positive view of their customers and the strength which accrued to Shell in planning its marketing policies.

While certain changes were made in detail, the approach has remained the same in the system which the heating and agricultural division is now mid-way in installing.

The division's users now acknowledge the workability of the system. The areas involved

have visual display units and printers (Centronix 701). The distributor's staff input orders and produce priced delivery tickets. All customer accounts are accurately updated daily. Automatic credit control prevents inadvertent deliveries to bad credit customers and engineers' calls are scheduled to make optimum use of their time.

One application which is es-

pecially complex, and had previously been handled manually with varying degrees of success, is boiler maintenance, charging and administration. This involved a 3,000 spare-part file and the new system now handles all charges for parts, engineers' calls, insurance and stock control. It is eventually hoped to institute completely automatic re-ordering of spare parts.

An extension to order capture is the ability to calculate how much heating a customer uses so that a tank refill can be scheduled without the customer needing to order. Future applications will include the prediction of supply and demand among non-heating customers. Shell has found that users at authorised distributors have had little difficulty in adapting

to the system. Key personnel are trained one month in advance of the arrival of the system, usually four people per site, through an intensive one-week course, and the division's own staff provide systems management skills.

A divisional implementation team also ensures that targets are met, supervises the data take-on period, and ensures on-the-job training.

Using an ADDS Consul 520 video terminal supplied by Terminal Display Systems, Yvonne Gloor of Pilot Oils, Nottingham handles customer accounts and administration on the network. This is one of 300 terminals which are being installed by Shell throughout the UK.

"Computer Weekly", "Data Processing" and "Systems International" present

# COMPEC'78

Britain's major peripherals and systems exhibition

Olympia, London, December 5, 6 and 7

10 am to 6 pm (closing at 4.30 pm on the last day)

Now in its eighth year, Compec is bigger than ever in its new venue and location a wide choice of computer

peripherals, small business systems and mini and microcomputers. Here are some of the 200 exhibitors:-

- |                                |                                      |                                |

# Why advanced technology has been quarantined from the rest of India

AT a time when the Greater London Council is considering the establishment of a Free Trade Zone on the docks along the Thames, the operation of one such zone is of particular interest. TIM PALMER reports from Bombay on SEEPZ, the Santa Cruz Electronics Export Processing Zone.

THE Free Trade Zone is a third world innovation designed to boost exports and to guarantee the rest of the country that advanced technology is available. It is a collection of new factory buildings in a large compound where companies can acquire space at favourable rates and make full use of the abundant pool of cheap and competent labour in the Bombay area.

Everything manufactured or processed at SEEPZ is intended for export, and to this end, customs formalities are made very easy. Parts or work are airfreighted in to nearby Santa Cruz international airport, and delivered direct to SEEPZ, where they undergo customs clearance within the compound. Theoretically this provides for a very fast turnaround, and makes it worthwhile for companies to consider setting up, say, a data preparation centre in SEEPZ and fly work in weekly from the US or Europe.

The most celebrated name at SEEPZ, Tata Burroughs, has not actually arrived yet, and when it does begin manufacturing operations has been decided to take space not in one of the factory units but in a large warehouse.

There is considerable confusion about exactly when Burroughs will begin manufacture at SEEPZ; some say that printer sub-assemblies for the B80 small business computer will begin to be manufactured later this year; others say that neither dates nor products have been finalised.

Nevertheless the intention is certainly to manufacture peripherals and sub-assemblies for Burroughs low-end B80-B800-B1800 line, and the hope is that ultimately complete B80 systems will be built in India.

The company has an author-

ised capital of \$5 million, of which \$1.5 million is at present paid up, and is owned by Burroughs and Tata (CWL) since September 16, 1976; as well as manufacturing and assembly, the company will set up a software development centre where machines will be imported, used for development and re-exported, within SEEPZ. Tata Burroughs will also take over

the Tata Data Centre, which has been operating since 1974, and will be a major factor in the company's success. It is a semiconductor manufacturer in itself who wants to reduce its stake in the company, which is also

owned by Tata. The company has been set up to handle the principal work at SEEPZ is packaging semiconductor chips and stringing core memories. Wafers are flown in, scribed and diced at Indosil, soldered into the chip carriers, packaged and re-exported.

Memory cores are also stringed and assembled into stacks for a number of customers, among them Tata, Burroughs and the Indian government. The company is also a major factor in the company's success.

the traditional centres of off-shore assembly. Computer Automation, the US low-cost OEM manufacturer, is building visual display units at SEEPZ, and has found favour with the Indian government as a result. CA Alpha LSI-2 board minicomputers are being used in the National Informatics Centre, which will provide a major information service to the major ministries of the government.

Such exploratory tests are now so expensive that companies are going back to the original tracings and reprocessing them using newly-acquired computer-based analysis techniques. However, multiple shock wave plots are superimposed on a single strip of paper and the shock wave has to be processed. The information of tracing the individual lines is being done at SEEPZ with the results being freighted back to the US.

UN to help fund big government database

ONE of the most ambitious computer projects under way in the Third World is India's planned National Informatics Centre (NIC). The idea of the NIC is to establish an enormous database by most of the ministries of the Indian government, and the plan is to build a hierarchical star network around a mainframe (CWL, September 18, 1978). The machine is to be chosen, but all the major mainframe manufacturers, including

IBM, Burroughs and Univac, are bidding for the business (CWL, June 18).

The mainframe is to be selected shortly for the next year, and the Information Development Programme (INDP), is putting up \$1.5 million for the project, including 100 million for the mainframe.

The plan is ultimately to establish a distributed database in various ministries but, as a first step, all the data bases will be built up on the large computer, which will be connected to micro-computer terminals.

The terminal computers being made locally are about a dozen have been built so far around Computer Automation LSI-2 microcomputers; some 150 terminal computers are ultimately to be based on these different types of mini.

Work has already begun on the database, using the Hierarchical Image DBMS on the HP-21MX minicomputer. The database is expected to be used as a front-end to the mainframe.

Databases are being established in the various departments. The Finance Department is establishing a central base of information covering surface and ground water rainfall and meteorology, the

exchange, statistics, industry and technology, patent information, systems handling, manufacture, imports and

## MYRIAD SALES EXECUTIVES FOR FINANCIAL SYSTEMS CENTRAL LONDON c.£10,000

Myriad is the fastest growing time sharing bureau in the U.K. and is a subsidiary of a leading U.S. Bureau specialising in the solution of complex financial problems. The company market a range of powerful financial application systems aimed at giving senior management direct access to accurate up-to-the-minute information making the vital decision process a quicker and surer one.

Myriad entered the market place in 1976 and have grown to a company of over 2,500 personnel, running approximately 100 mainframes with a turnover of \$150 million. The company have sales and service offices throughout America, the United Kingdom, Western Europe and Japan. They have developed advanced application software and a communications system TYMNET which links as the most proven network in the commercial computer services business.

Myriad have been operating in the U.K. for a little over four years and have already achieved an enviable track record having the fastest growth of any Tymshare subsidiary. To continue this pattern several senior financial marketing personnel are required to augment a busy team operating in Central London.

Applicants should have a strong financial background with ideally sales experience gained in a bureau or systems house environment, able to handle applications from candidates with formal accounting qualifications and a desire to enter a client oriented environment will be given serious consideration. Due to the unique nature of the systems involved, extensive training in the company's financial products is envisaged. Successful candidates will receive an excellent base salary, with potential to achieve earnings well in excess of £10,000 together with generous lease car arrangements and excellent career progression.

To discuss the company and these vacancies in greater detail contact Tymshare's Consultants.

## FREELANCE ANALYSTS and PROGRAMMERS

ARE YOU SEEKING AN OPPORTUNITY TO JOIN A SMALL PROFESSIONAL COMPANY (IN A PERMANENT ROLE) WITHOUT TAKING A DROP IN SALARY?

If you have been successfully as a contract Analyst or Programmer for some while you are now probably considering your next move. Normally to enter the mainstream of commercial employment can mean a dramatic reduction of the high salary you are currently earning (c. £9000).

Myriad are currently seeking an additional computer professional to be trained as a Recruitment Consultant. This position offers a high degree of independence, working very much on one's own initiative and can be both interesting and immensely satisfying.

Myriad commenced operations in 1974 and over the last four years has doubled in turnover and size each year; to maintain this momentum requires not only skill and determination in its management but also in each member of the team.

If you feel you may be the person for whom you are looking, please telephone to arrange a meeting to discuss the vacancy in detail.

Based in Fleet Street  
First Year c. £9000

## Overseas collaboration

ANY organisation with a computer in India that sells time and offers services to outside users, believes itself to be fully competent to collaborate on overseas projects.

As far as hardware goes, Bombay Suburban Electric Supply, BSES, the city's power company, is better placed than most, with three IBM 1401s. The machines churn over for a combined total of 1,100 hours a month, over half the time being devoted to work for outside customers. BSES is in the market for a new 512K byte machine to replace the 1401s this year, and ICL is hoping to get the business with a 2850.

BSES claims 50 computer professionals with experience in Autocoder, Cobol and Fortran, has done conversions and markets software packages, and seeks to collaborate abroad on the development of application and system software.

Systech International of Bombay is a small company specialising in the use of computer-aided design and systems analysis for the chemical and petrochemical industry. It employs 35 people including 10 consultants, represents specialist software company SDRC of Cincinnati in India, and claims competence in linear and mixed integer programming.

The Central Machine Tool In-

stitute in Bangalore wants to cooperate with foreign companies on the development of Computer-Aided Design structural analysis packages both for use in India and for export. The Institute was founded by Czechoslovakia from 1961 to 1966, and now gets funding of \$1 million from the United Nations Development Program.

India EDP Centre of Delhi wants to quadruple its number of employees to 80, and plans to get its first in-house machine, an Interdata 7/32 32-bit mini later this year. It is developing a key-to-floppy disc system, and adapting a Linotype typesetting machine to take input from floppy discs.

OST Data of Delhi specialises in engineering applications, employs 15 professionals and says that it is collaborating on projects in France and West Germany. It is also putting together data conversion systems for in-house use.

Laveren Consultancy Services of Madras has five professional staff and is doing software development for a microcomputer built around the Z80 chip. The machine is being built by Processor Systems India of Bangalore, and includes video terminals, two Megabyte floppy disc backing, console typewriter, printer and tape cassette drive.

Isvaran has written a compact Cobol compiler for use on a 16K byte system which includes all the features of the AnsI standard apart from sort-merge facilities.

Isvaran uses the 370/155 at Madras Indian Institute of Technology for this work, writing in PL/I and converting either to assembler or machine code. Thus the same compiler can be offered for other microcomputers.

The company has developed a system to control expenditure on parts procurement at the Bhilai Steel Plant; the system at present runs on an IBM 1401, but Isvaran will be converting it to run on a Rjad ES-1020 when the Russian machine arrives.

Isvaran is planning to develop a two or three partition operating system for the Z80, handling simultaneous data entry, data processing and spooling. It seeks overseas contracts for the development of system software.

Getting right down to earth, Data Prep of Madras already has a contract from a US company for punching and verifying mailing lists. It employs 12 people, uses ICL key-punches, charges \$6 per 10,000 keystrokes punched and verified and promises to start work on a job within two weeks of receiving the order.

**ANALYSTS AND PROGRAMMERS—LONDON 4K TO 7K**  
Candidates with one year or more DP experience are urgently required by hundreds of London and Home Counties clients. prepared to pay attractive salaries in order to attract experienced development staff.  
EMS are obtaining as many as five offers for virtually all London and Home Counties staff using our computerized recruitment system. We are literally covering every single installation in the country. No one can afford not to find their next appointment without the EMS recruitment system. You're cross matched against every vacancy, rather than just the two or three advertised each week which appear of interest. Every installation, all hardware, operating systems, languages and applications. How can you compete against EMS? We get results and have thousands of satisfied clients each year.  
Just complete the attached application form and see how fast we get results for you. Even better, bring it with you and meet us in London if you can make our visit in interview date. Otherwise, don't miss the golden opportunity of EMS services on your behalf. We have a worldwide service, second to none. For ten minutes of your time to complete the form, we'll prove it to you.

## TOP SALESMEN AND SALES MANAGER

EMS is placing substantial further development of both our Consultants and Top Salesmen/Managers during the coming months. Our Consultants achieve sales across all maintenance ranges and encompass a wide range of industrial/commercial organizations. Analysts must, therefore, possess a high level of Business Analysis skills of rapidly changing clients' requirements and producing convincing solutions where appropriate or negotiating the relevant consulting services required in other systems or programming staff providing the necessary support.  
Senior, our Turnkey Systems Division provides total U.K. coverage, including Honeywell Level 8 multi-processor systems and supporting software to a wide range of U.K. sites.  
Businesses/Managers capable of developing their own territories are urgently required. A substantial quantity of leads are also supplied by extensive and vigorous advertising campaigns and Rapid Show, therefore, businesses must possess an adequate tele-computer knowledge for Turnkey Systems positions. Car will be provided with adequate bank and high prospective clientele. Apply for telephone for interview during the next week at our Birmingham Office. All U.K. territories will be controlled from the pending regional development of other offices.  
Consultant—John Wood

**ANALYSTS**  
One of Britain's largest leading groups has a large quantity of outstanding systems analyst vacancies to fill with excellent remuneration and benefits. The client requires candidates to have an IBM background preferably with some programming experience. In addition any IAS or COBOL knowledge would be a desirable asset. Excellent working conditions are available with interesting and challenging projects and good career development opportunities. Interested applicants should send their CVs to the Recruitment Manager, who will be provided with appropriate information.  
Consultant—Dan Philp, telephone 021-484 7908

## TURNKEY SYSTEMS—SYSTEMS DEVELOPMENT MANAGER

EMS has embarked upon a further development of its Turnkey Systems Division. The new development is based in Birmingham and is looking for Systems Development Managers. We are seeking a Senior, experienced Manager to guide and direct Analysts in the development of Turnkey Systems. The successful candidate will have a high level of Business Analysis skills, a strong knowledge of systems programming and operating systems, a high level of knowledge of the Turnkey Systems Division, and a strong knowledge of the Turnkey Systems Division. The successful candidate will have a high level of Business Analysis skills, a strong knowledge of systems programming and operating systems, a high level of knowledge of the Turnkey Systems Division, and a strong knowledge of the Turnkey Systems Division.  
Consultant—John Wood

**PROGRAMMERS**  
Graham's first IBM Series 30 site has a large number of vacancies in the Systems Division. The client requires candidates to have an IBM background preferably with some programming experience. In addition any IAS or COBOL knowledge would be a desirable asset. Excellent working conditions are available with interesting and challenging projects and good career development opportunities. Interested applicants should send their CVs to the Recruitment Manager, who will be provided with appropriate information.

## MINI/MICRO SPECIALISTS

**THE COMPANY:** Paramus is an American Systems House, with a difference. We specialise, primarily, in 'state-of-the-art' projects on Mini and Micro Computers. Currently, we are in the process of opening an office in Maidenhead, Berkshire, to complement our American and Belgian offices. Paramus has been built around its people. We subscribe to the 'small-company' philosophy. In as much as none of our offices exceed thirty people. We find that this allows us to maintain a friendly, personable environment, whilst building a highly professional team of individuals who are motivated by technically challenging projects. The people we are seeking are very special. They are very technically competent, yet are sufficiently 'business-orientated' to represent our company in negotiations with our clients. Their backgrounds may vary from a new entrant in the industry to a highly sophisticated user. An example of the qualifications required is given below. If you are interested in us as a company, but do not meet all the criteria, give us a call anyway, so that we can explore the possibilities.

## IDEAL QUALIFICATIONS

- Degree in a science subject
- Minimum of two years' experience
- Knowledge of at least one Assembler Language.
- Knowledge of high-level, structured language.
- Good experience in communications.
- Good experience in Software Design
- Background of work on challenging projects.
- Expertise in at least one mini/micro system.
- Compulsory experience.
- Point of sale.
- Industry experience in:
- Electrical supply
- Oil
- Process Control
- Banking/Finance/Insurance

If you think that we have got something in common, call:  
Chuck Backett  
Littlewick Green (0828-82) 2166, Ext. 402

## Programmers, Analysts

## DO YOU FIT?

ARBAT is a real success story of British Computing...

Real Time Banking and Communications Systems are our areas of expertise—Currently the top 50 Banks use ARBAT systems.

UK and International projects are underway and we offer sound careers in Programming and Systems, in a dynamic and exciting environment.

Initially London based then overseas opportunities—Salaries are by negotiation, and we have a reputation of being top payers—Reviews are at least twice in year one—We offer continuous training for the future.

All ARBAT jobs are TASK oriented—and career progression is on merit and from within. Want to hear more about the other benefits—We will send you a profile on ARBAT—and arrange interviews locally—Phone or write NOW to discuss the opportunities with—

Write to: Morris Hogg at ARBAT (UK) Ltd.

Home No. CHESHAM (02405) 71576 after 6pm.

ARBAT(UK)LTD.

## COMPUTER OPERATORS

A number of vacancies exist for Computer Operators to work with Harwell's IBM 370/168 computer. This computer provides a central service to several hundred scientists, both on site, and in other laboratories via remote terminals.

Previous experience of computer operating is desirable, but training will be given to suitable candidates, who must be over 18 years of age.

There is a basic working week of 42 hours in 5 days, but Data Processors must be available for shift work throughout the 24 hours.

Pay ranges from a minimum of £31.76 p.w. as a Trainee, to a maximum of £53.66 p.w. for a fully trained Data Processor. In addition allowances of up to 17½% of basic pay are given for shift work.

For further details and an application form, please contact:

Mrs R.A. Stevens, Personnel Department,  
United Kingdom Atomic Energy Authority,  
Harwell, Didcot, Oxon, OX11 0RA

# Your DP experience will travel faster by helicopter

On behalf of Bell Helicopter International, IAL are recruiting data processing professionals for a two-year contract in Iran. It is an exciting project, involving the supply of logistics and training support service to the Imperial Iranian Army Aviation and demanding extensive data processing facilities.

A large integrated data base has already been established housing the flexible Honeywell 6000 system and the wide cross-section of DP talent we require will certainly benefit from two years in Iran.

## Programmer Analyst

Four years' experience is required with at least two years' recent Honeywell experience, utilising COBOL 68 and Integrated Data Store (IDS) programming language.

## Software Analyst

Two to five years' experience is desirable in the area of software support and maintenance for Honeywell's GCOS and TSS, GMAP programming.

## Data Base Analyst

Two years' recent experience is required in designing and maintaining data bases, utilising IDS utilities. Knowledge of IOS Informa is desirable.

## Teleprocessing Analyst

Three years' experience is required in the area of software support and maintenance for Honeywell's TDS. Knowledge of GRTS/NPS and GMAP programming.

## Systems Analyst

Broad experience is required in defining user requirements for the development of data processing systems/program specifications in the area of financial or aerospace engineering and production systems.

As part of the Bell Helicopter International team, experience is not the only benefit you will derive from a two-year contract.

You will also receive a tax-free salary, a housing supplement of £365 per month plus a child allowance of £480 p.a. accompanied. In addition, generous relocation assistance will help you make the transition from the UK and there are free flights home with leave arrangements.

There is nothing to lose and plenty to gain from spending two years in Iran, so write with brief cv quoting ref. no. 7758 to The Recruitment Officer, IAL, Aeradio House, Hayes Road, Southall, Middlesex. Tel: 01-574 5021.

## UMIST Research Assistant in Information Retrieval

A Research Assistant (male or female) is required in the Department of Computation. Applicants should be registered in one or more of the following areas:

A) Information Retrieval: Current projects include a correlation data base, the use of a microprocessor for an intelligent interface to International Union systems and personal information systems. Applicants should have an Honours Degree in Computing, preferably with a base towards data processing and information handling aspects of computing.

B) Program Design: This project is concerned with the examination of program design using the Michael Jackson Technique. Although working knowledge of both COBOL and the Michael Jackson Technique is essential, knowledge of COBOL on POP machines is also desirable. Starting salary will be up to £3,881 per annum on Range 18. Letters of enquiry, giving details of qualifications and career so far, should be sent to: Dr. P. Jackson, UMIST, 100 Grosvenor Road, Manchester M13 9PL.

Please quote reference C/M/9816 (A) or C/M/9816 (B) as appropriate.

## MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

## PROGRAMMING CONSULTANT

LONDON

To £7000 + Profit Sharing

Joining a software house can be an exciting experience; becoming a member of a dedicated team of system and programming professionals engaged in a wide variety of projects on hardware ranging from Data General and Hewlett-Packard to ICL 2960 and IBM 370/158.

System applications vary dramatically from small in-house turnkey projects to major on-line real-time systems. The position offers career progression; exposure to several manufacturers' hardware working on pure development applications, together with an excellent salary and benefit package.

Ideally you will have at least 3 years' experience of COBOL, with the ability to cope with dynamic situations — react to client requirements and pressures whilst at the same time maintaining control of a development project. Such skills are frequently under-developed in Senior Programming staff and this opportunity to gain such experience of client oriented situations makes this an excellent opening to move into a consultancy role.

## SYSTEMS OPPORTUNITIES WITH PPP in Tunbridge Wells c. £6,000 P.A.

PRIVATE PATIENTS PLAN was formed nearly thirty years ago. Its objective, to provide alternative medical facilities to people for a low monthly outlay. Since its inception it has grown steadily till today when its turnover exceeds some £20,000,000 per annum. Throughout these thirty years it has needed not only to grow in financial terms but also in efficiency and technical knowledge in order to keep up with the growing demand for private medicine and a vastly more sophisticated medical world. Part of its need for increased efficiency has been met by the installation of a new ICL 2950 system.

Applicants wishing to discuss this appointment should telephone KEITH DUNCAN during office hours at the number shown below or between 7 and 10 p.m. any evening and weekend at Crowborough (08926) 5545, quoting ref. CW59.

## JBA

## Senior Mini/Micro Engineers

London to £10,000

SCICON, a member of the BP Group of Companies, has an international reputation for the advanced application of mini and micro computer technology. Planned growth in the development of hardware/software systems has created opportunities for high calibre engineers to join their specialist Hardware and Engineering Services Division. The work is highly varied and interesting. If you have broad experience which includes some of the following:

- Microcomputer hardware/peripherals
- Logic design
- Engineering laboratory practice
- Product/prototype development
- Analogue interfacing
- Data communications
- Formal quality assurance
- Site engineering/supervision

SCICON can offer a challenging career and an environment where initiative and commitment are encouraged and rewarded. Good starting salaries and excellent conditions of employment also apply. Contact: Margaret Stevens

## OR Analyst

London up to £6,500 +

Opportunities in join the research department of this large organisation do not occur very often, where the requirement for personnel is due to increased work loads rather than staff turnover.

The work involves Critical path analysis, simulation, financial planning and mathematical modelling, incorporating on-line and interactive programming in FORTRAN on mini-computers.

Candidates must have a numerate degree and at least 18 months experience of OR work.

Salary commensurate with suitability but not likely to be less than £5,500. Contact: Mike Creamer

## Programmer

London Base

We have been retained by a highly successful manufacturing group to recruit an Application Programmer to join a small software group. The team is responsible for providing the group with the necessary expertise to help implement new installations and systems. Candidates will essentially be good COBOL programmers, have extensive experience of commercial applications and a willingness to be retained on DEC minis. In addition, previous involvement with multi-programming and VDU systems would be an advantage.

This is an excellent opportunity to work with professionals in sophisticated and original environments.

The post involves extensive UK travel. Contact: Margaret Stevens

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

**JAMES BAKER ASSOCIATES, International Personnel Consultants**

16 Maddox Street, London W.1. Tel: 01-491 4478

## Programmer Technicians

Surrey Start to £6,900 + BUPA or £9,000

This company specialises in the provision of conversion services to installations changing or upgrading their hardware. They require COBOL technicians, particularly those with FINVAC or HONEYWELL 66 level experience, who enjoy programming and wish to keep in touch with the most modern ideas and equipment. Candidates already at a Senior level will be considered for Project Leading positions, with salaries c. £8,000.

Their Richmond H.Q. services both the UK and Europe, so after initial training you may well find yourself spending short periods on the Continent - supported by generous tax-free allowances on top of your salary. If you relish the idea of travel and variety, and look forward to a technical career, you may fit in to this exciting environment.

First class training and promotion opportunities, relocation expenses and free life and health insurance. Contact: Andy Wright

## Systems Manager

Somerset £6,500 - £7,000

This highly successful electrical component manufacturer has retained JBA to help recruit a Systems Manager to run their relatively new PDP11/44 installation in Somerset. It is a small and very professionally set up site, running various commercial on-line systems under RSTS/E, using BASIC + as the programming language.

Ideal candidates will have a good commercial systems background, allied to relevant DEC experience, and be the type who enjoy taking on a great deal of responsibility - involvement with all aspects of the D.P. department's work will be inevitable, in such a small intimate environment.

Apart from the quality of life naturally associated with living in the West Country, the position offers a reasonable salary plus BUPA and a generous holiday entitlement. Relocation expenses will be available where necessary. Contact: Andy Wright

## COBOL Programmers

London & Home Counties up to £8,000

A large international organisation has a number of opportunities for programmers at both junior and senior levels, to work on commercial development projects.

Candidates should have a minimum of eighteen months experience of COBOL on either IBM or ICL mainframes. Senior programmers should be able to demonstrate a substantial background in commercial applications. Other languages, such as PL/I, RPG2 or PLAN would be considered. Training will be available where appropriate.

Excellent salaries, fringe benefits and career prospects. Contact: Jim Baker

## FIFE REGIONAL COUNCIL FINANCE DEPARTMENT COMPUTER PROGRAMMERS

Salary: £3933/£4461 + £312 supplement

Qualification required: At least two years' COBOL experience. The Region has an ICL 1903A configuration, but this will shortly be replaced by an ICL 2960. A wide variety of work is undertaken and career prospects are excellent. Application form and further details may be obtained from: Regional Personnel Officer, Fife House, North Street, Glenrothes, Tel: Glenrothes 754411. Ext. 246/8, to whom completed form should be returned not later than 31st November, 1978. Please quote Ref. Number HP/48/382/CW.

## CLASSIFIED COPY

All classified copy should reach our offices no later than 5.30 p.m. on the Monday preceding Thursday's publication. If complete artwork is supplied 12 noon on a Tuesday. Ring Ian Carter for further details on 01-261 8016

## New ICL 2970 Installation Operations

One of London's largest Boroughs is at the process of installing an ICL 2970, 2 megabyte computer. Vacancies now exist for Operations/Control staff to join our team. We run a two shift system, live people per shift. Each shift will be responsible for On-line Operations and Data Control.

### Senior Operators

Ref. C/8/8762 to £5130 inc. S/A

With at least three years' experience on a large multi-programming machine, one year of which has been in a supervisory position. Duties will include training, working to a determined schedule, diagnosing hardware and software faults, liaising with engineering and user personnel and being fully conversant with On-line Operations.

### Senior Controllers

Ref. C/8/8763 to £5130 inc. S/A

With suitable experience of Data Control in a large machine environment, preferably including On-line Operating. Duties will include: being responsible for controlling all input data associated with processing, assembling and debatching data in accordance with pre-determined schedules, liaising with users, training all staff under him/her and being fully conversant with On-line Operations.

### Operator/Controllers

Ref. C/8/8764 up to £4150 inc. S/A

With at least one year's experience in a large multi-programming environment, either On-line Control or On-line Operating. The successful applicant will carry out duties both On-line and Off-line using some of the most up-to-date equipment in a large go ahead installation. We offer the usual excellent public service conditions, including 20 days holiday, a restaurant and good sports and social facilities. If you are an ambitious person keen to develop your technical and personal skills, telephone 01-701 2870 anytime for an application form or write to: THE PERSONNEL OFFICER, London Borough of Southwark, 27 Peckham Road, London SE6 6UB. Quoting reference and job code. Closing Date 19 November 1978.

**Southwark**

## Lothian REGIONAL COUNCIL

### NAPIER COLLEGE OF COMMERCE AND TECHNOLOGY COMPUTER UNIT

Napier College has a major commitment to education in computing and data processing and a separate Computer Unit to provide a service to students and staff has been created. The unit is split between the two major sites of the College. At Merchiston the unit operates a CTL Modular One Computer and at Southside an ICL 1902 Computer and staff may be required to work at either site.

Applications are invited for the following newly created vacancies:

#### 1. CHIEF PROGRAMMER/ ANALYST

The person to be appointed will be responsible to the Director of the Unit for:

- the implementation and maintenance of operating software
- the analysis and programming duties associated with the development of applications programmes.

This is a Senior position and preference may be given to a candidate with a commercial background in Computing. In the absence of the Director the Chief Programmer/Analyst will assume responsibility for the Unit.

Salary is in accordance with Scale AP IV/V.

#### 2. COMPUTER OPERATIONS SUPERVISOR

It is anticipated that the successful candidate will have had a minimum of three years' responsible experience of both batch and interactive modes of computing.

The Computer Operations Supervisor will be responsible to the Director of the unit for all operating staff and the daily operating schedule for the installations.

Salary is in accordance with Scale AP III/IV.

#### 3. SENIOR PROGRAMMER

An experienced programmer is required with a knowledge of Systems Software implementation and applications program development. Preference may be given to candidates with experience of ICL or CTL computers.

The person appointed will be responsible to the Chief Programmer.

Salary is in accordance with Scale AP III.

#### 4. SENIOR COMPUTER OPERATORS

Two experienced operators are required, one for each of the units two Computers.

The person appointed will be responsible to the Computer Operations Supervisor for the day-to-day operations including supervision of operating and data preparation.

Experience in operating using batch and interactive modes at with ICL packages is desirable.

Salary is in accordance with the Scale for Higher Clerical Grade.

The following Salary Scales are applicable:

AP III	£4368 - £4773
AP IV	£4920 - £6404
AP V	£5668 - £8088
Higher Clerical	£3279 - £3561

## ata Computer Recruitment

A division of ATA Selection and Management Services, recruitment consultants to industry and Commerce since 1962

### OPERATIONS SUPERVISOR

TO £4,000

### OPERATOR

TO £3,000

CENTRAL EDINBURGH

Our client, a leading legal partnership, wish to recruit an Operations Supervisor and an Operator for their Philips P410 installation in Central Edinburgh.

The Operations Supervisor will work normal office hours and perform a dual role as Systems Operator/Supervisor. The ideal applicant will have experience in operating small business computers, VDU's, although some experience of operating larger systems.

The Operator will work first time and again preference will be given to applicants with experience of small business computers, VDU's, however, candidates with relevant operating experience will also be considered.

The salaries are negotiable around £4,000 and £3,000 respectively and carry the normal fringe benefits.

For an immediate interview telephone Ross McGeon.

## FUTURE DPM

CLOSE TO END OF M1 c £6,500  
2+ YEARS COBOL

This is an excellent opportunity for a person with a sound COBOL programming background who now feels capable of assuming full responsibility for formulating and developing new commercial systems and undertaking total charge of our client's installation.

The company, supported by a large American conglomerate, are well known and respected in the audio and computer peripheral sectors of industry. They have recently installed an ICL 2903 and now require an experienced programmer to implement a complete range of new systems.

The successful applicant, ideally with two or more years' programming experience in a financial environment, will be encouraged to develop an all round analytical and programming expertise and can look forward to promotion to DATA PROCESSING MANAGER where excellent opportunities are available.

The company offers four weeks' holiday, pension and life assurance schemes with a subsidised restaurant and excellent career prospects.

# Join us for Compec '79

If you're going to Compec this year, you will see that Tektronix is firmly in the forefront of the expanding graphics terminal market, associated computer peripherals and microprocessor emulation... so why not be with us for Compec '79?

We will be at the Royal Kensington Hotel on:  
Tuesday, 5 December 1978  
Wednesday, 6 December 1978  
Thursday, 7 December 1978

1000-1800  
1000-2130  
1000-1800

We invite you to come and talk to us about your future.

We need:

**Sales Executives** - 3-4 years' experience preferably in computer sales and a degree in engineering, mathematics or computer sciences.

**Product Support Engineers** -

Communicative engineers with a degree/HNC in electronic engineering, familiar with digital/analogue techniques and design experience in data communications.

**Systems Analysts** - At least five years' post-graduate experience on a wide variety of main-frames, operating systems or communication software, your analytical, incisive mind and an interest in varied customer problems is what we're looking for.

**Customer Service Engineers** - A sound basic knowledge of digital and analogue techniques is a pre-requisite with preferably previous experience in servicing computer terminals and peripherals on site.

We offer:

Above average salaries, non-contributory pension and life assurance scheme, and other big company benefits. We also, of course, ensure that all the necessary sales or product training is given at our well-equipped training centre in Amsterdam.

Don't forget - the Royal Kensington Hotel, Tuesday, Wednesday, Thursday, 5-7 December, all day. But if you can't make it, write to or phone Jim Rockall at Tektronix UK Ltd, Coldharbour Lane, Harpenden, Herts (Harpenden 63141) for an application form and information package.

### PROGRAMMING ADVISER

Applications are invited from graduates to join one of the groups within the HUMAC computing service concerned with advising, teaching and providing documentation on the use of computer programs. Users of the service come from many different universities and cover a wide range of academic disciplines. The areas where expertise is currently needed are graphics, scientific applications and survey and statistical analysis. Applicants should have an understanding and sympathy with both research workers and students, and a desire to extend the knowledge and use of computers. The Computing Laboratory has excellent facilities including powerful IBM hardware with extensive capability and a large repertoire of library programs.

The appointment will be made on one of the following scales according to age, qualifications and experience: Range IA £2,853-£8,556 per annum. Range II £2,085-£7,754 per annum. Membership of the appropriate University superannuation scheme will be required.

Further particulars may be obtained from the Registrar, The University, 5 Kensington Terrace, Newcastle-upon-Tyne NE1 7RU, with whom applications (three copies), together with the names and addresses of three referees, should be lodged not later than 15th November 1978. Please quote reference CV.

## Freelance Programmers

Our client has IBM 370 Mainframes and will pay attractive rates for programmers with a minimum of four years' programming experience, at least a year of which is on IBM 360/370 equipment using COBOL under DOS or DOS/VS.

If you have the relevant experience and would be interested in a long term contract in the Northern Home Counties area then contact us.

Please write with full details. These will be forwarded direct to our client. List separately any companies to whom your application should not be sent. Ref. FY.1077.

These appointments are open to men and women.

## CAREER PROGRESSION PROGRAMMERS & ANALYST/PROGRAMMERS

BEDS. c £5,500

The decision to change environment, whether in a new job or new location, is not one to be taken lightly. Assurance of an exciting and technically stimulating challenge can often alleviate doubts and confirm your future plans. Our client, a division of a major British company, can offer these incentives due to their commitment to embark on a complete range of commercial systems. In order to support these plans, the company is now looking to recruit additional professionals to become actively involved at the initial stages of projects and see them through to successful implementation.

Career minded PROGRAMMERS and ANALYST/PROGRAMMERS, who possess a minimum one year's experience in either COBOL or ASSEMBLER and who are familiar with IBM 370 utilities, can look forward to an outstanding career path. Apart from attractive salaries and prospects, the company also offer very favourable relocation expenses and other fringe benefits.

Ref. N1/211

## PROGRAMMERS

SLOUGH To £5,000

Our client, a busy engineering company, is currently developing several on-line real-time applications.

If you would like:

- ★ To receive training in advanced IBM software.
- ★ Develop COBOL programs involving database and TP systems.
- ★ Work on a variety of applications projects.
- ★ Five weeks' holiday a year.
- ★ Excellent starting salary and conditions of employment.
- ★ To join an active sports and social club.

—and you have a minimum of 12 months' COBOL programming experience, then this could be a good opportunity to accelerate your career.

Ref. E1/211

## ANALYSTS & PROGRAMMERS

CROYDON £7,000-£10,000

If your current position can offer you development work in challenging areas of computerisation; excellent job prospects; together with a salary in the band quoted above you will probably not need to read further. If however you do not have, but would like, this type of package you need to know more about the jobs on offer at our client's offices in Croydon.

We are recruiting both Analysts and Programmers for projects commencing in the early part of the New Year. Applicants should have a good general D.P. background and the potential to progress in a demanding environment. The computer department is housed in modern offices in Central Croydon easily commutable for Kent, Sussex and S.E. London.

Ref. SE1/211

## SENIOR ANALYSTS CICS/IMS SYSTEMS

THE CITY To £7,500 + BENEFITS

Senior personnel are required to define systems for a large IBM installation utilising both IMS and CICS. Projects cover a wide variety of applications and the company can boast of a very successful record in activities typical of the City. Candidates should have at least two years' proven analysis experience with particular emphasis on a methodical approach to system/program specifications and testing procedures. The more senior applicants will possess on-line or database experience coupled with a programming background.

Career opportunities are excellent as the data processing department is seeking to expand the hardware configuration to keep pace with the demand for D.P. systems. First-class starting salaries are further enhanced by an annual bonus and modern working conditions.

## ANALYST PROGRAMMER

c£5,600 + Generous Expenses  
CHESHIRE

Our clients require an Analyst Programmer with approximately three years' experience of the analysis of business problems and providing a computer based solution.

He/she will be actively employed in Management Control Information Systems and in-depth knowledge of IBM Systems, particularly S32, and RPG II are essential. The successful applicant's first assignment will be to identify requirements, specify systems, write program specifications and be responsible for the installation of a S32 at a subsidiary company and the subsequent user training.

Thereafter, he/she will operate within the group in a "consultancy role" specifying systems and/or hardware.

As a direct result of the nature of our client's activities, there will be a high level of travel within the UK to the various offices and to subsidiary companies. It is also probable that the occasional visits to associate companies on the Continent will be necessary.

Salary increases consist of two elements, a cost of living increase and a merit reward which is directly related to the degree of effort and success achieved by the individual.

GENEROUS RE-LOCATION ASSISTANCE IS AVAILABLE consisting of Estate Agent's fees, all legal fees and physical removal costs.

For further details telephone 081-832 5856 or write enclosing curriculum vitae to:

CHARING CROSS  
HOSPITAL MEDICAL  
SCHOOL  
(University of London)

### MACHINE OPERATOR

required to work in Computer Unit.

Duties will include data preparation and assisting with computer operation.

All necessary training will be given.

Good social and recreation facilities on site.

Salary according to age and experience on scale £1,681-£2,819 plus £450 per annum London Allowance.

Applications on forms obtainable from The Secretary, Charing Cross Hospital Medical School, The Raynolds Building, St. Dunstan's Road, London W8 8BP. (Ref. 424/5).

UNIVERSITY OF BURY

COMPUTING UNIT

### SENIOR COMPUTER OPERATOR

(Occupational Leader)

Up to £4828

FOUR WEEKS' LEAVE

We need a Computer Operator who has had at least two years' experience and is now looking for a position with greater responsibility and wider variety. Actual experience on specific computers is less important than the personal qualities of adaptability and initiative. We already have several different computers, and new machines are expected to be commissioned next year.

There are three shifts from Monday to Friday. Excellent sports and social facilities. Very pleasant surroundings in University campus.

For further details, or to arrange an informal visit to the Computing Unit, please telephone Mr. R. E. Birrell, (Computing Unit) on 01291 7291 ext. 757.

For an application form, write to the Unit Officer, University of Bury, Guildford, Surrey GU2 5XH. Telephone Guildford 71281 ext. 452.

West Yorkshire Metropolitan County Council  
Traffic Unit

### Section Engineer

— Post Ref. TF28 017

PO1A £5,727-£8,342 inclusive of supplement

To lead a small team undertaking the planning, design and implementation of various parts of the UTC signal network in the county, initially primarily in Bradford, and such other traffic signal work as is necessary. The post is based in Leeds.

Sound background in traffic engineering essential, particularly in the field of Control Systems and Traffic Signals, together with experience in Transit. Professional qualification in relevant discipline required.

Application forms may be obtained from Directorate of Planning, Engineering and Transportation, Room 238, County Hall, Wakefield and should be returned not later than 15th November, 1978.

## SYSTEMS PROGRAMMER

£7,600 p.a.

You should have a good background in OOS/VS, have worked with operating systems for at least 18 months, and preferably you will have knowledge of ASSEMBLER, CICS, GRASP and/or POWER. Experience of TP/Database systems would also be advantageous, though not essential.

This is an opportunity to join a small yet progressive organisation. You should be prepared to travel to client locations around London or beyond. A mileage allowance will be paid, and any other travel costs reimbursed.

Applications will be treated in the strictest confidence.

In the first instance apply to Bernie Holland, X-Calibur, 47 Essex Street, WC2R 3JF. Telephone 01-353 8201. Please quote reference Nd. 320.

# Analyst/ Programmers

## Cobol/Assembler

Could you develop and set up systems on a mini or micro computer?

West of London/M4 ten minutes  
£5250 to start

Our client, a major British group with a unique record at home and in exports, plans to develop warehouse information and point of sale systems utilising mini and micro computers in various locations in the UK. The plan includes the linking of some of these units to the group's central mainframe in the West Country as appropriate.

The successful candidates will be involved in developing systems and programs, initially as part of a small team, on mini computers, working closely with user staff, and using high and low level languages. Later on, as their knowledge and expertise in mini computing increases, they will become the key people in mini and micro computer systems development, and will project manage wide ranging developments of mini computer processing in the group.

You are an Analyst/Programmer, or a Programmer, with 1½ to 2 years experience in programming in COBOL or Assembler, or both, and keen to move now into a ground floor opportunity in a mini computer systems environment. You have accepted that by the mid 1980's mini and micro computers, large and small, distributed or otherwise, will contain the bulk of data processing systems development in many companies. You want to move over, and establish yourself now, rather than get trampled on in the last minute push, if you are already into mini computers then it could be so much the better for your application.

The client is able to offer very good starting salaries together with unique benefits and opportunities and, a substantial relocation package and bridging loan where appropriate. Full training will be provided as appropriate, including systems analysis and design, systems management, distributed processing, real time processing, etc.

Please write a brief ONE PAGE list of name, address, age, home and office telephone number, programs written to date, machines and software involved, present position and salary, and send it immediately to ANTHONY SPURR, Management Recruitment Division, 40 King Court, at the address below. Please list on the reverse side those companies you would not wish to be considered for. These appointments are open to either sex.

Systems

# We want to shake the living daylight out of our ICL system software

At Sainsbury's, we're making the transition from 2 heavily loaded 1904s to 2 2870s, soon to be configured as a multi-processor. The new installation will handle on-line transmission to 12 depots and other plans for the immediate future include the setting up of a database.

We've a couple of systems running on the 2870s already, with many more applications to add on as soon as possible.

But before we get any further, we need a man or woman who can test our system software to the point of destruction. And if it passes that test, to build it into a complete, customised operating system that will do anything you demand of it.

It's much more than just a routine performance monitoring job. By talking to our analysts and programmers, you'd determine what facilities they need. Then, using all your extensive technical knowledge, you'd make sure that the system software is equipped to provide them.

The main qualification you'll need is a real understanding of operating systems — particularly George III — on a conceptual as well as a technical level. 2800 experience is an obvious advantage — and one that would be reflected in your salary. You'll also need to be as good with people as with technicalities of operating systems, because you'll be supporting staff who will have a big influence on your success.

For this outstanding candidate a starting salary of up to £8,000 p.a. plus all the benefits of a company of this end stature of Sainsbury's. But what will interest you is which is the chance to use all your systems software experience — and gain more — on one of the largest and most advanced 2800 installations in the country.

Ring Laurence Calhoun on 01-921 6047 for full details.

J. Sainsbury Ltd., Stamford House, Stamford Street, London SE1 0LL

**SAINSBURY'S**

# Computer Operator

Watford  
c. £4,000-£4,500 (2 shifts)

Robert Bosch Limited, a subsidiary of the world-wide Bosch Group, market a wide range of automotive and domestic products. We now seek a Computer Operator to join our IBM installation at Watford. Ideally you should have around 18 months experience on IBM hardware operating under DOS/POWER/ICS/VS, although training on

CICS can be provided if necessary. Benefits are those you would expect from a large company, including generous discounts on all our products.

For further information please telephone: Ken Dawling, Hardware Manager, Watford 4423 extension 315, Robert Bosch Limited, Rholes Way, Watford W12 4L.

**BOSCH**

As a result of the further development and enlargement of our computer operations, Frank Mint Ltd., the D.K. division of the world's largest printer manufacturer, which markets and distributes silver, bronze, pewter, crystal and porcelain silver, hollow and solid, will be taking delivery of a new Honeywell Level 640 series 1974. Consequently, we are now seeking for the following two vacancies:

**COMPUTER PROGRAMMER**  
£5500 +

Applicants should have a sound educational background, together with a minimum of 18 months programming on a 1974 Level 640 series, or 1974 Level 640 series, under DOS/POWER/ICS/VS. The successful candidate will also be required to display the qualities required to progress quickly in a fast moving environment.

**COMPUTER OPERATOR**  
£4650 (including Shift Allowance)

Applicants should have a minimum of 18 months experience operating a Honeywell Level 640 series computer under DOS/POWER/ICS/VS. Some experience of CICS, although not essential. In addition to the salary, we operate a new company Pension Scheme, from 1st April 1979, and a contract of 20 days holiday and a non-contractual bonus. We will be commencing interviewing in the near future, so if you're interested, telephone Peter Brown now on 01-407 8124, or write to the address below:

FRANK MINT LTD.,  
130, BROMLEY ROAD,  
LATHFORD,  
LONDON, S.E.1.

# Oh those **CU** benefits... for Cobol Programmers

- MORTGAGE AT PREFERRED RATE OF 5%
- EXCELLENT PENSION SCHEME AND LIFE ASSURANCE

- 33½ HOUR WEEK
- FLEXITIME
- PAID OVERTIME
- FREE LUNCHES
- EXCELLENT RELOCATION PACKAGE

As I sit looking down my garden at 4.10 on a summer afternoon I'm glad to reflect on the decision I made to join Commercial Union.

For a start I work a 33½ hour week with flexitime. I sometimes work a bit longer if I'm asked as the overtime pay comes in useful. Even so when I joined at £4,250 with only 1½ years COBOL experience it was pretty good. Some of my colleagues with 3 years COBOL earned up to £5,250.

And then there are the other benefits. Apart from the short working week I have an easy journey to the office. 5 miles in the car — 10 minutes with free and easy parking, or I can take the train to the station opposite the office.

The preferential mortgage and the company location help me to have a nice house in the country. The low cost pension and life assurance look after me, and the wife and kids. I eat well, with free lunches. When I joined then I moved house and the relocation package was great.

So join me at CU — ring CAPP ASSOCIATES quoting reference CW 43-8J and get things moving.

## ICL TRAINING — COURSE DEVELOPERS 2900 and VME/B

We have had 10 years' success in developing and marketing multi-media courses, with over 5500 customers worldwide.

Following contracts with the UK Government we are already developing courses for ICL users. We are now planning a major extension of this series.

**Course Development Specialists £6000-£8000**

We require two training specialists aged 27-35 ideally with experience in the development of course materials. You should have had 3 years' experience in an ICL environment, preferably including 2800 and VME/B. Training in education technology and the development of video-based packages will be provided in the USA.

These positions provide a rare opportunity to join the European market leader in this rapidly growing field and therefore offer exciting career opportunities.

Telephone JOHN KIRKHAM, General Manager, on 01-584 8852, or write enclosing brief career details to:

**ADVANCED SYSTEMS INCORPORATED**  
1 Knightsbridge Green  
(Entrance in Raphael Street)  
London SW1X 7QA

## PROGRAMMING ADVISER (FOR MICROPROCESSORS)

Applications are invited from graduates to provide help and advice to members of the University staff in connection with microprocessors controlling experiments at equipment in the computer network. The network, based on an ICL 11 microprocessor, provides links to the IBM 370/150 central computer. Experience with a range of microprocessors at the system design and support level is essential. The appointment will be made on one of the following scales according to age, qualifications and experience: Range A: £3,000-£3,500 per annum; Range B: £3,000-£3,750 per annum. Membership of the appropriate University superannuation scheme will be required.

Further particulars may be obtained from the Registrar, The University, 6 Kensington Terrace, Newcastle-upon-Tyne NE1 7RU, with whom applications (three copies), together with the name and address of three referees, should be lodged not later than 24th November, 1978. Please quote reference CW.

# JUNIOR PROGRAMMER/ANALYSTS AND TRAINEES

**THE INSTALLATION**  
Established since 1967 the department is currently training:

- Twin ICL 2904's
- 5 EOS 60's
- 3 Nine Track Magnetic Tape Drives
- 1500 Equipment for distributed processing at five depots.
- Communications Processors with Video Terminals.

**THE JOB:**  
We require Junior Programmer/Analysts preferably with one year's systems experience and/or a knowledge of COBOL to support senior analysts with a considerable increase in business developments on a wide range of challenging projects. We have already installed local and remote communication systems which are being expanded.

Trainees should have two A level grades A-C or HND/HNC in Business Studies. Our 4 year career development scheme provides basic training in O&M, programming and systems analysis skills.

**THE COMPANY:**  
BDH is the leading manufacturer in the UK of laboratory and analytical fine chemicals. Our head office and manufacturing complex are situated at the picturesque Dorset coast at Poole. We have associated companies and distribution centres in the UK and overseas.

Telephone Poole (0202) 748520 Ext. 302 for more information or write to: Miss G.A. Weston (Personnel Officer), BDH Chemicals Ltd., Poole BH12 4NN.

# SECTION HEAD-DEVELOPMENT

HARROGATE (c £8,000)

An experienced computer professional is required by the North Eastern Region of the Central Electricity Generating Board to lead one of two sections engaged in the development of computing systems.

The Section is involved in:

- Implementing, Designing and Installing Computing Systems
- Providing advice on Computing
- Maintaining and developing computing procedures and standards.

The person appointed will, in addition to the recruitment, training and supervision of the section's staff, be directly involved in development work as a leader of major projects and in the formulation of computer Branch Plans.

As a senior member of the Branch, the Section Head will be expected to make a substantial contribution to the development of computing within the Region.

The Computing Service currently provided to the Region is based on:

- An ICL 1904S under George III running batch, MOP and a small amount of T.P. work.
- Use of a twin IBM 370/168 installation at C.E.G.B., at H.O. in London.

Various mini-computers are used at Power Stations.

In order to improve the service, provide a base for further development and to

satisfy the growing requirement for T.P. applications, the ICL 1904S will be replaced by a 2900 early in 1980. Proposed applications include Materials Control/Purchasing, Costing and Budgeting, Work Control and Scheduling, Plant Performance analysis and other engineering and commercial systems.

The development of Distributed Computing is being actively considered as the means of satisfying a growing requirement for general purpose computing facilities at Power Stations and other major management units.

Applicants should have a degree of professional qualification, together with several years experience in implementing data processing systems, and should be able to demonstrate up-to-date knowledge of developments in Computing. Evidence of supervisory experience is essential.

The salary will be within the range of £7,146 p.a. - £8,311 p.a. point of entry dependent upon age and experience.

Applications should be on standard application forms obtainable by telephoning Recruitment Section (Harrogate 702633/4) and should be returned to the Regional Personnel Manager, C.E.G.B., Beckwith Knowle, Otley Road, Harrogate, HG3 1PS, to arrive not later than Monday 13 November 1978.

Please quote reference SVN/TTB/CW.

Central Electricity Generating Board — North Eastern Region

## JOINT MATRICULATION BOARD

Universities of Manchester, Liverpool, Leeds, Sheffield and Birmingham

## COMPUTER PROGRAMMER

Salary within the range £2585-£3125 (scale under review)

Programmer with at least two years' practical experience required for the Board's computer installation which operates an IBM 370/118. Some teleprocessing and systems analysis experience would be an advantage. For an applicant with relevant experience it might be possible to offer a salary at a higher scale extending to £3842 p.a.

Application form and full information from The Secretary (Staff C), Joint Matriculation Board, Manchester M13 9EU.

## COMPUTER PERSONNEL APPOINTMENTS

PROGRAMMER/ANALYST  
TWO FULL-TIME  
POSITIONS  
CISCAS £8,000

A young person experienced in Cobol and Mini Computers, to travel from Midlands base to sites in the north and east. Duties include specification and installation of new systems, programming and support of accounting staff. Early promotion is envisaged.

021-643-0951

# SYSTEM PROGRAMMER c. £5,000

**THE JOB:** Maintaining and developing a DOS/VS system with POWER/VS, SHADOW 11T.P., on line SHADOW/QUOTA, PL/1, and RPG11. Also some application programming.

The successful applicant will be responsible directly to the Chief Programmer.

**THE INSTALLATION:** A 256K IBM 370/125 with 3330 disks, tape and V.O.U.s.

**REQUIREMENTS:** Experience in system generation and maintenance, plus some assembler. Also, an ability to work under minimum supervision with maximum initiative. Experience in Shadow 11; PL/1 or RPG11 would be an advantage.

**THE COMPANY:** Is a first-class employer and offers excellent conditions of service. Re-location expenses will be met where appropriate.

Please write briefly setting out experience to: A. Sampson, Company Personnel Manager, E. Gomme Limited, Spring Gardens, High Wycombe, Bucks.

# MICROPROCESSOR APPLICATIONS

The Computer Research Group in the School of Systems Design wishes to appoint a graduate to work on the hardware and software aspects of microprocessor applications.

This is an opportunity for young graduates in electronics, or a science based subject, with experience, to enter the field of microprocessor applications.

Project currently being run by the group and staff are encouraged to arise from the project between software and hardware.

Salaries within the range £3384-£4444 (under review).

For an application to: The Computer Research Group, School of Systems Design, University of Manchester, Oxford Road, Manchester M13 9PL.

CHAMBERLAIN INSTITUTE OF TECHNOLOGY  
APPLIED  
TECHNIQUES

# ADMINISTRATION SUPERVISOR

London (Hounslow) £7,000 +

A world-wide U.S. company manufacturing and selling electronic components needs an Administration Supervisor for its U.K. Sales Division in Hounslow. (Est. since 1965).

The successful applicant will report directly to the Managing Director and have overall responsibility for all Order Processing and EDP functions.

A System 10 business computer is in operation and the immediate task is to derive maximum benefits from it and improve service to customers.

A recognised business degree or similar qualification is desirable and previous data processing experience is essential. The position may suit a person presently in a data processing position wishing to progress into business management.

A substantial bonus is payable and other benefits include a contributory pension scheme, life insurance, four weeks' holiday increasing with service and relocation expenses where applicable.

To apply, please write or telephone for an application form to Philip Bullock, Joint Managing Director, Bourne (Timpos) Limited, Hodford House, 17/27 High Street, Hounslow, Middlesex, TW3 1TE. Tel: 01-570 2598.

*Appl. to Life*

# "For crying out loud,

can't anyone design a system properly?"

If you've ever felt that strongly about the systems you're obliged to work with, you could be the man or woman for us.

If you're sick of living with other people's sloppy software design, we can offer more than just an end to your frustration.

If you're convinced that with your guidance things could be done better, and you're itching for the opportunity to prove it, we'll give you that opportunity - and the challenge, responsibility, money and prospects that rightfully go with it.

Don't imagine that we're talking about a conventional programming or analysis job. No, we're talking about a software job that very few companies recognise the need for (which is why your job gives you so many headaches).

We're talking about software quality engineering.

It's an issue that we take very seriously indeed, for good reasons. Our business is to produce strategically important,

airborne radar systems that are built around real-time computers. So corrupt data or a faulty response can have drastic consequences.

That's why we need men or women to apply the strictest quality standards to our software and its generation. The standards and quality procedures are already set; your task would be to apply them rigorously. To identify problem areas. To put people right where they've gone wrong, as tactfully as possible. In short, to provide the promptings that individual consciences don't always provide.

An unusual job, certainly. An interesting and worthwhile job, definitely. And, in a new discipline in a growing department in a highly successful company, a job with a future.

To find out more, write to the man who knows all about it - Geoff Parry, our Software Quality Manager. Better still, phone him direct on 01-953 2030 ext. 3791. Alternatively, write to H. E. Batchelder, Marconi

Avionics Limited,  
Elstree Way,  
Borehamwood, Herts.  
Quote ref. MA 78112.

## Norfolk Systems Analyst

We are a privately-owned leading provincial newspaper group. Our modern Head Office is situated in the heart of Norwich, an exceptionally pleasant-looking city, close to the Norfolk Broads and within 30 minutes of a variety of resorts with golden beaches.

We currently use twin Univac 9480s with communications equipment to support our real-time advertising, accounts and text processing systems.

Candidates must have several years experience including the successful design, implementation and support of at least one major system. Experience of Univac 9480 series machines, Assembler level programming and real-time or time-sharing systems would be an advantage.

We offer a competitive salary, good working conditions, four weeks annual holiday, a profit sharing scheme, pension and life assurance schemes, cinema and social club facilities and assistance with relocation expenses where applicable.

Application should be made in writing to:  
Personnel Officer,  
Eastern Counties Newspapers Ltd,  
Prospect House, Raven Road,  
Norwich, NR1 1RE  
Telephone (0603) 28311

## Programmers c.£5,500 p.a.

Bring your experience to Kimberly-Clark in Maidstone, and share in our success.

Kimberly-Clark is a successful international organisation manufacturing such brand-leading paper products as Kleenex Tissues and Hi-Dri.

We require experienced Programmers to join a progressive installation engaged in developing interesting applications which include on-line systems and the use of data-base technology.

The required qualification is sound experience in a commercial programming environment, probably gained from at least two years in

programming. The installation is based on an IBM 370/148 computer which is due to replace the existing IBM 360/40 computer in December.

Initial salary will be up to £5,500 according to experience, together with other fringe benefits including BUPA and relocation expenses where necessary.

So if you're looking for a better job, that offers a great future, then make the move to Kimberly-Clark and share in our success.

Please write or telephone JANE BARTROP, KIMBERLY-CLARK LTD., Larkfield, Near Maidstone, Kent. Tel: Maidstone (0622) 77700.

Kimberly-Clark Limited, Makers of Kleenex Tissues

#### LONG SECURITY OF EMPLOYMENT

Superb opportunities have arisen due to planned and controlled growth patterns in the terminal and associated product areas, within a major Electronics Company.

We have been retained by our Clients, who have an enviable reputation, to identify sales personalities to operate in existing sales territories in London and the Home Counties, Scotland and the North East (preferably the candidate for the latter position will be located in the Edinburgh area).

Candidates for these positions should ideally have:

- ★ An understanding of terminal products
- ★ A qualification to Degree or HNC standard in a related subject
- ★ A confident sales personality to accompany a strong record in selling
- ★ Motivation and determination to succeed.

As may be expected from a major International Company, excellent terms and conditions including a relocation package are associated with these positions.

FOR FURTHER DETAILS CONTACT: Richard Champion on 021-236 3781 (24-hour answering service).

## Computer Programmer (Scientific Officer)

The Forestry Commission offers a period appointment of 3 years for a Computer Programmer at the Forest Research Station, Alice Holt Lodge, Farnham, Surrey.

**Subject:** The work is directed towards efficient processing of the data to be collected in a new additional Census of Woodlands and Hedgerows. It will involve close liaison with the statisticians designing the sampling system and with the Census Officer in charge of the whole project and will include programming, system design, statistical calculation and computer terminal operation.

**Age and Qualifications:** Under 26 with an honours degree in mathematics or computer science plus some knowledge of statistics.

**Salary:** Within the range for Scientific Officer £2,838-£4,415 depending on qualifications and experience.

Closing date for applications: Application forms and further details can be obtained from Mr. A. J. Freeman, Forestry Commission, 231 Cornhill Road, Edinburgh EH2 7AT. Completed application forms should be returned not later than 23 November, 1978.

## UNIVERSITY OF SURREY COMPUTING UNIT

## SYSTEMS PROGRAMMER/ ANALYST

Systems Programmer/Analyst needed to exercise his/her initiative in a small team involved with design and improvement of systems using mainframes, minis and microcomputers. Projects may include packet switched networks and multi-processor and distributed processor configurations. We currently operate two ICL 1900 computers and a Prime system; replacement of the 1900 equipment is expected in the near future.

The salary scale will be up to £8555 per annum, with generous annual leave.

Applications, in the form of a curriculum vitae, and the names and addresses of two referees, should be sent to the Staff Officer, University of Surrey, Guildford, Surrey GU2 6XH, or telephone Guildford 71281, extension 470 for further information.

## SOUTHERN ELECTRICITY SENIOR PROGRAMMER FOR REAL TIME SYSTEMS

Southern Electricity is engaged in the design, development and implementation of a large Telecontrol System. This will have a central complex containing ICL 2950 and PDP 11/34 Computers linked to a distributed processing system using Microprocessors located at nineteen different sites throughout Southern England. An opportunity now exists for a Senior Programmer to join the Computer Applications team engaged on this exciting project. Ideally the successful candidate will have appropriate computing qualifications and at least two years' experience of programming for Real Time Systems. A knowledge of PDP 11 Computers and/or Coral 66 would be advantageous. Training will be given where necessary. The position is based at the Board's Head Office near Maidenhead. SALARY WITHIN THE RANGE £4,231 - £8,216 per annum. Applications should be made on forms obtainable from The Secretary at Southern Electricity House, Littlewick Green, Maidenhead, and returned to him quoting 67/78 by not later than November 17, 1978.

## UNIVERSITY OF BRISTOL Programmer

for S.C.R. Mini Computer

Joint Appointment in Faculty of  
Engineering / Computer Centre

The Science Research Council has recently installed a multi-user mini-computer at the University of Bristol. This computer is the first of a number of such machines which will form a national network providing advanced interactive computing facilities for engineering research.

A programmer/analyst is required from 1st January, 1979 or as soon after that date as possible, to assist various research groups in developing programs and to ensure that the advanced facilities available are utilized to the full. The mini-computer will be linked to the IBM 360 at the Rutherford Laboratory and the successful applicant will be expected to become familiar with the facilities there. The work will also involve the provision of communications links to laboratory equipment, and responsibility for all user documentation. This is an opportunity to work with a group of highly-motivated research workers in an extremely stimulating environment.

Applicants should have an honours degree in an appropriate subject (e.g. engineering, mathematics, computer science, physics). The salary scale for the appointment is Grade 1A on the Civil Service Staff Salary Scale, £3,823-£5,555 per annum (salary scale as under review). The initial salary will be determined according to experience and qualifications and it is expected that the appointment will be made in the lower half of the scale.

Applications, including names, qualifications and experience and including the names of three referees should be sent not later than Friday, 24th November, 1978 to the Director and Secretary, Science Group, Rutherford Avenue, Bristol BS8 1TH (quoting reference JPB), from whom further particulars may be obtained.

## SYSTEMS ANALYSTS LECTURER £6,000-£7,750 CARDIFF/LONDON

A challenging opportunity for Systems Analysts who are seeking variety, good rewards and a role within an expanding organisation. The essential requirements are wide experience in their field with the ability to communicate clearly and succinctly.

Lecturing experience is not essential as there is a full training programme which includes the use of the latest technical teaching aids, e.g. CCTV.

The appointments are with our client, a

well established computer services company whose dynamic ideas have built up a broad sphere of operations including a sophisticated education and training service to government, industry and commerce.

The package is good, up to £7,750 depending on age and experience, plus the usual benefits of a large company, such as, handbook vouchers, pension scheme, etc.

We take action only after number any.

## Systems Controller - Computer Operations

Expanding consumer services means developing new systems for management. At the Automobile Association we are involved in a wide variety of new projects. Both long and short term and meet growing needs, we are presently in the process of expanding our computer capability with the installation of ICL 2900 equipment.

Applications are now invited for the post of SYSTEMS CONTROLLER within the existing and extended Unit of the Computer Operations Department based at Heath Office on Reading Road.

Duties involve checking all new and enhanced systems for adherence to standards; liaising with Management Services and user departments on technical and operational matters; and being responsible for the correct and efficient operation of the AA's computer services, including the security of each system, training of new personnel and providing forward plans. Applicants, male or female, should have good 'A' levels and at least 2 years' experience of ICL computing. The ability to communicate at all levels is essential.

Salary is from £5,000 p.a. or according to qualifications and experience. Benefits include a progressive pension plan, and include a comprehensive relocation package if applicable.

Please write to Kathy Holloway, Personnel Department.

Bovingdon, Bucks.

## VICTORIA APPOINTMENTS LIMITED

## Shaw Carpets Limited

## BARNESLEY - S. YORKS Programmer

This manufacturing company with a sophisticated D.P. organisation based on an IBM 360/50 is seeking a programmer with experience in DOS/VS using CICS for real-time and local teleprocessing systems required in addition to a knowledge of internal promotion.

The successful candidate will ideally have 12 months IBM ASSEMBLER experience and be prepared to relocate where suitable, and will join their enthusiastic team in the Management Accounting systems.

The Company offers excellent terms and conditions of employment. Applications should be sent to the Personnel Department.

For an application form in respect of this and hundreds of other vacancies, please write to Miss Val Holloway, Victoria Appointments Limited, 24 Mosley Street, Manchester M2 3LS (24 Mosley Street) and 061-234 7417 or home 444 511.

## Systems Analyst - Small Business

Minis/Maintenances up to £15,000

One of the most prestigious software companies in Europe is currently expanding their German operations in central Germany. Their business is based on a wide range of projects currently being developed on both Minis and Mainframes.

Due to this planned expansion, they want to meet several computer professionals who are competent in German. Technical background can be widespread but current priorities call for experience of System 370, 34, Nardorf, PDP 11, Novell, 2900, Siemens 330 and the internal of IBM DOS operating systems.

While our client can accommodate people seeking employment for a year or so, they definitely want candidates with medium to long term ideas about settling in Germany within the firm.

Ref. CW 44/1

## Technical Writer

WV/11/11/11

Switzerland

up to £15,000 p.a.

We wish to recruit 2 experienced technical writers for permanent positions with our Swiss clients.

The successful candidates will join large project teams, working up to 30 men years communications systems. Each technical writer will report to his project manager. The main responsibilities will include working to tight time scales, on the preparation of documentation and literature on the implemented projects for user purposes.

Candidates must have a proven track record in technical writing, and be prepared to work on their own initiative, servicing the needs of the project development teams in a highly progressive company in the communications field.

## Wave into Systems

into Systems  
into Systems  
Network

Middlesex

up to £6,500

A multi-million pound manufacturing organisation has an immediate need for SYSTEMS ANALYSTS to join them for the development of New Commercial Systems.

The Company, which is situated on the Harfordshire/Middlesex border, has a large installation with Communication Networks running throughout the country.

We would like to hear from Programmers who would like an opportunity of moving into Analysis or Analysts with 1-2 years' experience, who would like to be involved in the planned expansion with this go-ahead Company who offers excellent career paths.

Ref. CW 44/3

## Systems People

up to £6,000

Widened and Extended

up to £6,000

A multi-million pound food group situated at Welton on Thames only half an hour from central London, have a need for Systems Analysts for their installation which will shortly upgrade their Duol 370/148 to a 3032 with the introduction of IMS Database under MVS.

We would like to hear from applicants who have had at least three years' Systems Analysts experience. Database and previous programming experience an advantage.

They can offer you the opportunity to be involved in a development of the Distribution and Packaged Stock System for several depots and factories. Additional work includes significant enhancements to existing systems and developing applications for subsidiary companies.

Conditions of employment include Free Life Assurance, flexible working hours and relocation expenses where appropriate.

Ref. CW 44/4

## Systems Analyst

WV/11/11/11

Switzerland

up to £15,000 p.a.

An International Company requires an experienced Systems Analyst for a new development. Good commercial systems experience in a DOS/VS environment would be ideal, but successful candidates must have completed at least one decent commercial system. A programming background in Cobol would also be a help.

A top class salary and conditions of employment will be offered to the right calibre of applicant. Career prospects are good and relocation expenses will be provided where necessary.

Write or telephone: Gerald Coleman at Dublin 789577.

Ref. CW 44/5

## Small Business Systems

West London ASSEMBLER £4500-£8300

A major International Systems House who are better known for their mainframe work, have a fast expanding Small Business Systems Division.

They have an urgent need to recruit people who range from Programmers with 2-3 years' experience, through to Senior Project Leaders.

All you need is experience of ASSEMBLER on any machine, but if you have experience of SYSTEMS DESIGN, REAL-TIME ORDER ENTRY, or ORDER PROCESSING so much the better. Projects are all based on Real-Time APPLICATIONS on the ICL SYSTEM 1D and SINGER 1500 hardware.

Project teams usually consist of 2-3 people, allowing you to follow the project from specification through to implementation.

Salaries are well above market rate and the company can offer excellent career opportunities, Annual Bonus, plus usual Company Benefits one would expect from a company of this size.

Ref. CW 44/6

## Opportunity in Sales

London, W1

£9,000 on quota

A unique opportunity has arisen for sales people to join a young and rapidly expanding Bureau and Systems House, who can offer ground floor opportunity to the successful candidates.

The Company, situated in W1, has a prime 400 and sells both Application Software and Time. The applications are mainly financial orientated so you will be selling to Accountants and Financial Directors.

The successful candidates will be aged in their mid-20s, and have had 2 years' selling experience, preferably in a Commercial environment, but this is not essential as full time training will be provided. It is envisaged that your career path will give you the opportunity to move into management with the growth of the Company.

Ref. CW 44/7

## Programmer/Analyst Analysts

WV/11/11/11

Consider the benefits of

- ★ Working in West London
- ★ Working on communications systems
- ★ Progression to project leadership
- ★ Variety of job contact
- ★ Programme development through VDU's

If you are a Programmer or an Analyst and have had exposure to commercial applications (on any hardware), our client would be very interested to learn more about you and discuss your future. They are a well-established software house and offer a career path based on real time earning above average salaries and large company benefits.

Projects are divided into small teams and there are many opportunities for men and women with management potential to gain experience in project leadership at a very early stage.

Ref. CW 44/8

## System Programming Consultants for Distributive Projects

West London

up to £9,300

A major international Software House has a need for the following specialised people.

- ★ Programmers with Assembler or ICL 7602 15 Bit Communications Controller interfacing to a 2980.
- ★ Programmers with in-depth Singer 1501-1502 experience, which is linked to an IBM 370/148.

They also have a need for experienced Programmers to work large sophisticated 2800 projects using IMS and TP.

The Company can offer an excellent salary package with the usual fringe benefits one would associate with a Company of this size.

## Realistic Salary + Car

You may be a manager already, or a systems person with 2 years project management experience and seeking developmental responsibility. Either way, if your background includes the design and implementation of production control systems in an engineering environment for about 5 years, this will interest you.

Our client, established for over 50 years, has built a reputation for producing a range of special purpose vehicles, incorporating rugged reliability and modern innovations, which keeps them ahead of their competitors, both in the UK and overseas.

To not only maintain, but also improve plant operational efficiency, the company will shortly install new computer hardware. The system will be dedicated to providing management with all aspects of production information arising from applications which will include Materials Requirements Planning, Stock Control, Scheduling, and Product Costing.

A Manager to be appointed, 30-40, mature, enthusiastic and self-reliant. He/She must be prepared to use previous technical experience to modify and implement manufacturers packages. Further staff will be recruited to create a small development team and the incumbent will assume the increasing management functions for the department overall.

The offices are located in a pleasant Hertfordshire town and a competitive salary is offered, company car, 4 weeks holiday, relocation assistance etc. An immediate reply is advised by letter or telephone, quoting ref: CW 44.8D

## Analysts and Programmers

Howard MacIntyre Group can offer you a relaxed professional working environment in rural Suffolk within easy reach of London. The area offers excellent recreational facilities, good schools and first-class housing.

Experienced Analysts and Programmers are required for the Computer Department of our Group Services Company based in Bury St Edmunds and supplying computer facilities to three U.K. companies.

Installation is an IBM 370/139 1 megabyte operating under OOS/VS, CICS, with a OL/1 data base.

### Analysts

The successful applicants will join a small team and be expected to make a considerable contribution to our development plans for the network which will include 'on line' production systems for our U.K. locations engaged in the manufacture of agricultural and industrial equipment. Experience in data base and on line systems would be advantageous.

### Programmers

Experienced in PL1 preferably with OOS, CICS and OL/1 data base.

For both jobs we can offer an attractive salary and flexible working hours. Training will be given if required and assistance with relocation expenses made available where appropriate.

## CLASSIFIED COPY

All classified copy should reach our offices no later than 5.30 p.m. on the Monday preceding Thursday's publication. If complete artwork is supplied 12 noon on a Tuesday.

Ring Ian Carter for further details on 01-261 8016.

### System Design and Programming - Winchester

The computing services for the entire Wessex region are directly managed by the Authority and provide a service for all four Area Health Authorities in the region covering Hampshire, Dorset, Wiltshire and the Isle of Wight. Work is carried out on the following areas: Financial, Administrative, Manpower, Medical Hospital and other distributed systems.

There is a network of district based ICL 2903 computers and 7502 terminal systems linked into the main computer, a 1903T running under George 3.

### Senior Systems Analyst / Programmer

(Scale 9)  
Salary £4,650-£6,025

To be responsible to the Senior Systems Designer for detailed system design especially for the more complex parts of a particular application area for planning, writing and costing programmes within a system and for controlling the implementation of some projects.

You should have at least 4 years' experience including involvement in the development of at least one system which has gone into production.

### Programmer

(Scale 4)  
Salary £4,421-£5,326

Applicants for this post must have several years' experience in programming including involvement in the successful implementation of at least one system. Experience of structural design methods COBOL ICL 1900 and 2903 series computers George 3 and NCC standards would be advantageous.

For further details and application forms please contact the Personnel Department, Highcroft, Ramsey Road, Winchester. Tel. (0962) 83511, ext. 360.

Closing date 21/11/78

## Telecommunications Programmers

IBM United Kingdom Laboratories Limited are looking for experienced programmers, male or female, to be based at their European Laboratories Computer Network located at Hursley, near Winchester.

You will need to have at least two years' programming experience in one or more of the following: ● System/370 Assembler Language ● PL/1 ● BTAM ● VTAM ● Microcode ● Practical use of data bases.

Responsibilities will include the maintenance and enhancement of the advanced teleprocessing components of the Computer Network at Hursley and the development of programmes to manage the communications network more effectively.

Ideally you will be educated to degree level, although candidates who have achieved an equivalent standard will be considered.

An attractive salary will be paid in line with experience and potential. As well as a substantial employee benefits package, which includes a non-contributory pension scheme and free life insurance, we offer generous assistance with re-location expenses where appropriate along with variable working hours.

Please write to or telephone for an application form: Ron Stotter, Personnel Officer, IBM United Kingdom Laboratories Limited, Hursley Park, Winchester, Hants. Telephone: Winchester (0962) 4433 (Extension 6232). Please quote ref: C.W./936770.

## SALES EXECUTIVE SENIOR POST - LIVERPOOL £7,000-£8,000

This post offers a wide world full of opportunity with our client who has a range of unbeatable products and services to sell. Salary scale of £7-8,000 reflects a true earning situation before the addition of an achievement bonus, pension scheme plus life insurance and a company car. Age range is 25-45. Location is Liverpool.

Candidates will be assessed for future management roles, therefore a pleasant but fast paced personality is just as important as total confidence in their knowledge of the computer industry.

Professional experience should embrace data processing, software, hardware, programming and systems. Previous formal sales training and a proven track record in selling IT products are essential requirements.

White or telephone Anna Sweeney for an application form.

## CLASSIFIED COPY

All classified copy should reach our offices no later than 5.30 pm on the Monday preceding Thursday's publication. If complete artwork is supplied 12 noon on a Tuesday.

Ring Ian Carter for further details on 01-261 8016.

AnCO - The Industrial Training Authority  
Applications are invited from men and women for the following vacancy in the Data Processing Division of AnCO.

## TRAINEE SYSTEMS ANALYST

DUBLIN

The successful candidate will participate in data processing activities with the objective of acquiring a comprehensive knowledge of AnCO's computer-based systems and becoming experienced in the use of systems analysis techniques.

Applicants should have a capacity for accurate detailed work, logical reasoning ability, some relevant background either academically or in terms of work experience. A degree or other evidence of formal training in computer-related subjects would be an advantage.

The salary scale rises to £5,640 per annum. Contributory pension, group voluntary health and sick benefit schemes are in operation. A programme of training and development in relevant computer related subjects will be provided.

Application forms, which should be returned completed, before Friday 10 November 1978, quoting reference 304, may be obtained from:

Personnel Officer,  
AnCO - The Industrial Training Authority,  
P.O. Box 466, Baginbun Court,  
27-33 Upper Baginbun Street, Dublin 4.  
Telephone Dublin 01/686777.

## Opportunities in GRAPHICS PERIPHERALS

A rapidly expanding and highly successful electronics Company specialising in computer graphics needs two young professionals, either with expertise in this area or with the desire to gain such expertise.

### SALES EXECUTIVES

LONDON c. £5,500 + Commission + Car

You might already be selling, either in this field or mini-computers, or you could be working in sales support and want to start a career in sales. Either way you should have natural sales ability, willingness to undergo full product training and a strong desire to be successful in an exciting and specialised market place.

### SOFTWARE SUPPORT

WEST COUNTRY To £6,000 + Car

You're probably an analyst/programmer providing customer support for a mini-computer manufacturer, and perhaps getting bored working on the same systems. We expect you to be experienced in ASSEMBLER, and some knowledge of FORTRAN would be useful. An ability to get on well with customers is very important. Knowledge of computer graphics is not needed as full training will be given.

SPECIALIST RECRUITMENT CONSULTANTS

## COMPANY TRAINING MANAGER

International Mini Manufacturer  
Central London Based  
Basic Salary Circa £8,000  
Plus Substantial Car Allowance

Having enjoyed an excellent reputation in the highly competitive visible record and accounting machine market-place, our Clients are now establishing themselves as a leading supplier of small business computers through direct and indirect sales forces.

As part of their controlled expansion and Company development, we have been retained to identify suitable candidates for the key position of COMPANY TRAINING MANAGER.

While the successful candidate will almost certainly be currently employed within the small business computer market-place (either SALES, SALES SUPPORT, TRAINING or MARKETING) the candidate profile is deliberately open. However, it is crucial that applicants identify closely with the following job specification:

- \* The formulation of a total Company training program and responsibility for its implementation.
- \* Ultimate responsibility for the main training areas viz: SALES (PRODUCT & TECHNIQUES), SOFTWARE, ENGINEERING, MANAGEMENT and CUSTOMER, through the distribution of training responsibilities.
- \* The recommendation of the best training methods, and advice and assistance in the preparation of associated training materials.
- \* Liaison with the Training Board and the maintenance of formal and detailed training records.
- \* Naturally, where possible, to be involved in actual training courses, lecturing, etc.

THIS IS A FIRST-CLASS OPPORTUNITY TO FILL A KEY POSITION AND HELP DICTATE THE FURTHER SUCCESS OF OUR CLIENTS' OPERATION IN THE UNITED KINGDOM. PLEASE TELEPHONE THE ADVISING DIRECTOR, BOB BOWER, TO ARRANGE AN INTERVIEW.

Please write enclosing C.V. & Tel. No. To Mr M. R. K. Wilson  
Green Jack Shipping Agency (UK) Ltd.  
7th Floor, Plantation House  
31/35 Fenchurch Street, London E.C.3

Interviews will be held in London on 11th/12th December.

## THE SALES BIT

# Picking right time to present that glossy brochure

IN a job like mine where one is supplying a range of services within a sales and marketing environment across the whole spectrum of the computer industry, comparison are inevitable. A particular area in which one is exposed to extremes of taste and judgement is sales literature. Within the scope of a small number of computer companies one can witness a myriad of possibilities from the gaudy, banal and pointless to the tasteful, succinct and objective.

I often wonder how some material ever got as far as the printing press, such is the appalling presentation and failure to fulfil the basic function of an effective sales aid. One can only assume that in such cases the total process of generation and evolution is embraced in the single act of: "It's about time we had some decent sales literature, see what our advertising people can come up with" — or words to that effect.

Certainly, I have known many situations where there has been no real involvement by sales and marketing personnel because of the indifference for sales literature and the receipt of the completed article by salesman in the field.

The creation of sales literature, like so many aspects of sales management, cannot be effective if it is carried out in a vacuum.

There are so many benefits to be gained from harnessing the objective and creative capabilities of sales and marketing people, both in the field and in the office, that it is essential to solicit their ideas and opinions; whilst at the same time ensuring that the "horse", that is being designed does not become a "camel" as a result.

There are two primary considerations to be made in the context of sales literature:

● How should it look?  
● How should it be used?

The answer to the latter question is a complex task, so I will start with that one.

The main function of sales literature is to confirm a sales story which has already been told. It can also be used to emphasise a particular point within the sales story; but care should be taken not to hand over the sales presentation until the sales presentation is completed.

This is no better a method of pre-empting the major features of the sales story, no sure way of losing the client's attention, no more reliable a device for becoming "elbow-deep" than allowing the potential buyer to get his hot little hands on a nice shiny sales brochure.

After all, the material has (hopefully) been designed to be eye-catching and to hold the reader's attention, so what is his reaction to it? For each of the

man's "biased" argument when he can see the product for himself and make his own decisions? So salesmen, beware!

Sometimes sales literature can be used to create a sympathetic environment within which the salesman can justify an initial sales call; but this is a very risky practice.

More often than not, mailing sales literature has the opposite effect to the one intended. That is, it becomes a justification for the client refusing to see the salesman.

"I've read your brochure and consequently have a good appreciation of your products. If we ever want any 'we'll let you know' or 'it is clear that your products and prices are very similar to those we are already receiving from another supplier and with whom we are completely satisfied'."

This action once again pre-empted the sales argument and the application of benefits to the potential buyer's unique situation. The salesman is immediately in a defensive situation, justifying the very call itself rather than the direct benefits of the product to the client.

This situation is not only unsatisfactory but also doubly difficult because dialogue becomes locked into written and telegraphic communication rather than face to face.

The ideal sales literature to precede the first sales call

is a personal letter which can limit the dialogue to the bare essentials, i.e.: "This is who we are, this is what we do (perhaps including some reference sales), this is why you should see me, this is when I will telephone you for an appointment."

No details, just bold statements. One piece of sales literature that can sometimes give some extra "zap" in a first contact letter is a corporate brochure of financial report.

Such documents tend to be primarily devoted to the "Who we are" rather than the "What we do" and therefore have much less risk of destroying the salesman's pitch.

The salesman must ensure that the qualification of a prospect's potential business is within his control rather than the client's. This is where effective "desk-prospecting" is essential. The mailing of sales literature is, in effect, passing responsibility for that process over to the client.

Always bear in mind that the potential buyer is typically a very busy man who already finds it difficult to get all his jobs done in the time available without the added pressure of seeing someone who wants to sell him something he has been able to manage without up to now.

It is much easier to say no to a piece of paper than a salesman — usually! More next week.

TRADER

## PRODUCT NOTES

## Graphics VDU

INTERACTIVE process monitoring and control is the main application area for the 3877 graphics display unit now available from Siemens.

The 3877 comprises a microcomputer controller and up to four monitors can be used to select and examine any parts of a particular graphics frame in detail using a joystick that can move a "window" continuously over the frame.

The operator can also add to the contents of the screen interactively using a keyboard and light pen. Software provided by Siemens with the 3877 enables graphics symbols and images to be created and stored in an image database.

Siemens AG, (CW), Postfach 3240, D-8520 Erlangen 2, West Germany. Tel: (0513) 73394.

## Puzzle Answer

IN the simpler ordinary derangement problem, a derangement of the natural order of n objects (Integers) 1, 2, 3, ..., n-1, n is given by a(1), a(2), a(3), ..., a(n-1), a(n) with a(h) ≠ h. Now interchange a(n) with one of the (n-1) possible symbols, say a(h). If a(h) ≠ n, this is an (n-1)th order derangement, but if a(h) = n, this is an (n-2)th order derangement.

Also D(1) = 0, D(2) = 1, D(3) = 3, D(4) = 9, D(5) = 44, D(6) = 265, D(7) = 1679, D(8) = 15552, D(9) = 133496, D(10) = 1334961, D(11) = 13349610, D(12) = 133496100, D(13) = 1334961000, D(14) = 13349610000, D(15) = 133496100000, D(16) = 1334961000000, D(17) = 13349610000000, D(18) = 133496100000000, D(19) = 1334961000000000, D(20) = 13349610000000000.

Thus, the number of double derangements of order n, given by D(n), is actually D(n) = D(n-1) + (n-2) × D(n-2). But for n = 5, D(5) = 44 and for n = 4, D(4) = 9. So for n = 5, the (total) number of double derangements is 44 × 9 = 396.

# SDI

## IBM Hardware Specialist Computer Operators Technical Writer

### HARDWARE SPECIALIST

We require a **UNIQUE INDIVIDUAL** to become our Hardware Specialist.

The successful candidate should have in-depth knowledge and experience of large scale IBM equipment including 360 and 370 CPUs and I/O.

Currently SDI are at another exciting stage of our continuing ambitious research and development program of software development needs for the 1980's, of which the successful applicant will play a very important role.

The position offers you a chance to work a normal day with no more road running by car, and will involve providing specialist support to associated companies who have their own systems. You will need the ability to evaluate and recommend on Hardware investment, which will not restrict you to current IBM technology (Series A, B, C, D or even E?), and you will have the option to be educated in advanced Software development techniques. The success of this demanding, out-of-the-ordinary job will depend largely on what YOU can make of it in an international group dedicated to future expansion.

SDI conducts innovative research and development techniques which continue to keep it a leader in the independent software industry. The type of environment provides not only a stimulating challenge, but also very competitive salaries and a comprehensive company-paid benefit package which is continually being developed. The positions are not jobs of today or yesterday but **JOBS FOR THE FUTURE**. Read no more, phone High Wycombe (0494) 20947 to obtain further details of each job with their **HIGH REWARDS**, or complete coupon and send to: SDI, PO Box 84, High Wycombe, Bucks.

### OPERATORS

- Where are YOU?
- We are here in High Wycombe
- We are SDI
- SOI operates IBM 360 and 370 equipment, developing software packages like GRASP, FLEET and EPAT

### OPERATORS — Are you BORED or FRUSTRATED?

You may be one of many who feel trapped in a job without prospects of promotion or opportunity to get involved or develop and use your talent effectively.

An SDI career could not be more different. No mundane production work, but interesting and involved software creation. Working for SDI, a company in the forefront of software development, your skill and energy will be appreciated and rewarded. Sociable two-shift system. Start the ball rolling today—phone (0494) 20947 or complete coupon below.

### TECHNICAL WRITER

for Computer Software

Are you a **TECHNICAL WRITER** with or without relevant experience or **PROGRAMMER/OPERATIONS** person capable of technical writing? The position requires a person who can take complete responsibility for the writing and production control of SDI Technical Manuals for both users worldwide and company, internally. The successful applicant should possess:

- ★ ability to write clear, accurate technical documents
- ★ knowledge of IBM DOS or DOS/VS operating systems
- ★ excellent command of English language
- ★ ability to work without supervision

SDI operates an in-house computerised text maintenance system which will be a major tool of the job. To apply, preferably with an example of your work, phone (0494) 20947 or complete coupon below.

If you have experience in business heavyweights and enthusiasm can match our abilities, ring Colin Smith on 3686.

## Ascii through the Logic Gate

An epic in 32K words, by Richard Forsyth

### Block 20 (Blockhead)

Having dispatched Ascii on a do-or-die mission to Fort Ranfour with Dr Null's contagious gigantic induction program embedded in his microcode, Hex rejoins his fellow outlaws at Sprocket's Hole. In the small hours his repose is shattered by a signal on his personal radio. Simula is trying to make contact.

"HEX? Are you receiving me?" came Simula's inquiring voice again, crystal-clear through the ether.

"Receiving you loud and clear. Over."

There was a crackle of static, then her reply: "I can't hear you too well. Can you increase the power of your transmission?"

Hex hesitated. His transmitter was for local use as a walkie-talkie in and around Base 18. So was hers, but evidently she had got hold of an amplifier. If there was one thing the System would like, it was a nice strong radio beam to take a fix on.

He looked around at his companions asleep on the wooden floor. To give away his own position was bad enough, but if he were caught they would fall with him.

"Hex?"

If it had been Fetch or Execute, he might have suspected a trick and shut up. But Simula? Surely she was incapable of treachery. His reply went out at normal strength: "What is it?"

"Listen," she responded instantly, "I still can't hear you very well, but this is an emergency. I'm being held captive at Fort Ranfour. They want to use me to lure you in. I must warn you: don't come even if I ask you. Do you understand?"

"What do you mean?"

"Don't on any account listen to any further broadcasts I make. They may torture me and I may agree to ask you to meet me somewhere; but IGNORE III OK?"

"Torture you?" Hex's mind was reeling.

"It's no good," she said, "I still can't hear you clearly. Just remember what I've said. Don't listen to me after tonight, no matter what. Bye, Hex. Good luck."

Hex boosted his transmitter to full power. "Simula! Wait!"

"No. It's not safe to go on. Someone might eavesdrop. Over and out."

"Simula, I have to tell you something too. Don't go yet."

But all his calls were unavailing. She had closed down for the night.

He switched off his FM set. This bolt from the blue had stirred up a gaggle of unresolved questions; but none more insistent than this: Why did he have the receiver on in the first place? Why, since leaving Base 18, had he kept that channel permanently open? There was really only one answer.

He rose to his feet, careful not to disturb the other sleepers. He could see only one way ahead. Simula had warned him not to contact her; but he hadn't had time to tell her that Ascii was on his way, primed to destroy Fort Ranfour. As soon as Ascii arrived the whole System would go phloic, and in that conflagration Simula would undoubtedly perish. He owed it to her: he must go to Fort Ranfour and bring her out alive.

He tiptoed outside. It was another sharp cool desert night. The stars were precise pinpoints. He felt wide awake and raring to go. He walked away from his comrades with no real thought for the consequences of his action.

His mind turned to Cleo. At 16, he decided, she was just too young. He was 55 and though in terms of the android life expectancy of 255 years and he was still a stripling (hence his nickname, the Hexadecimal Kid) it made him too old for her. She had plenty of spirit, all right: she was a plucky girl. The trouble with Cleo was that she was too possessive. She was very stubborn about not getting cybernated too. She had a pathological phobia of all things electronic. All she wanted was to settle down on some reservation — free from interference by the Information Society — and raise a family. It was not a prospect he could share with any enthusiasm.

The first hint of dawn tinged the sky. He quickened his rather leisurely pace. Fort Ranfour was near San Jose. The quickest way was to head north through Silicon Valley. That meant crossing the ruins of the human reservation again.

When it grew light he left the road and made his way across rough country. In the early afternoon he came to the desolate reservation. He was amazed to find that the humans were back — a few of them anyway. In the centre of the ghost town some tents had been erected, and the smoke from a cooking fire was curling lazily into the air. You had to give these humans full marks for tenacity: like rats, it was hard to keep them down for long.

He gave them a wide berth. A lone android could expect no mercy after their treatment at the hands of the Night Operators. He didn't want them venting their spleen on him. So his path led, skirting the city, to the wooded hillock where he had buried his father, Abraham Synapse. It seemed more than one lifetime ago.

Feeling in a contemplative mood, he scratched about, turning over the fallen leaves with a stick; but he could find no sign of the grave. Professor Synapse (or Dr Null, as he still thought of him) had returned to the earth.

He sat down and reviewed events since he had last been there. The System circulated horrific tales of data-starvation, but they were largely bogus. Now that he had written a neat little forgetting algorithm he had had no more trouble with directory overflows, and his average access time was greatly reduced. Of course he had to lose certain trivial details, but he had come to prefer it that way.

Forgetting, he concluded, was very important. The uncritical hoarding of information was a great handicap. If the Database could only renounce its miserly attitude towards data, half its problems would disappear overnight. After all, everyone knew that data expands to fill the storage allotted to it.

Has he forgotten something? More memorable incidents next week.

## SAFE COMPUTING LIMITED WOKINGHAM BERKSHIRE

Safe Computing Limited is a fast expanding software house employing over 170 people in the UK, offering a full range of computer services.

Safe has now opened a new office in Wokingham and is looking for staff to help install, support and develop its highly successful production control and accounting packages.

### ARE YOU:

- Stifled by lack of promotion prospects?
- Restricted by knowledge of only one machine or application?
- Office bound, bored?

### SAFE WILL TRAIN YOU ON:

- The ICL System Ten minicomputer and others.
- Production Control Systems — SafeS package.
- Inflation accounting, costing and ledger systems — SOFA, SCIRT & SOLAR packages.

### JUNIOR PROGRAMMERS PROGRAMMERS ANALYST PROGRAMMERS ANALYSTS

**£3,000  
to  
£6,200**

### SAFE REQUIRES:

- Career minded professionals.
- Knowledge of at least one low level or Assembler language.
- Ability to work to deadlines.
- Flexibility and mobility.

### SAFE OFFERS:

- A career with one of the fastest growing software houses in the UK.
- Early responsibility and customer contact.
- Large company benefits, small company opportunities!
- Index-linked, inflation proof salaries.
- Excellent company mileage allowance.
- Opportunities for overseas travel.

### INTERESTED?

Please write to Mike Harrison, General Manager at Safe Computing Limited, Raddyn House, Molly Millers Lane, Wokingham, Berkshire, or telephone Wokingham 791212.

A member of the Chubb Group.
